This survey was made with a Swiss Kern theodolite, Model DKM 1, No. 77769, having horizontal and vertical circles, 50 mm. In diam. The circles are graduated in degrees and 20-minute increments. An optical micrometer, adjustable to the vertical and horizontal circles, permits the reading of angles direct to 10-second accuracy and estimating to 1-second accuracy. The instrument was in good condition at the time of the survey and all adjustments were in good order.

All azimuths in this record were determined by the method of horizontal-angles-right referred to the meridian determined by the following observation:

January 19, 1977, at Cor. No. 4 of the ELS-BETH No. 4 lode, latitude 33°06'26'.6" N., longitude 109°20'23.3" W., elevation 5,960 ft. above sea level, and temperature 45° F., make a series of six altitude observations on the sun for azimuth at approximately equal time intervals, three each with the telescope in direct and reversed positions, observing opposite limbs of the sun, and reading the horizontal angle from a reference point about 1,500 ft. north-westward SE. to the sun.

Mean time of observation, 105th meridian standard time

= 9h 59m 09s a.m.

Declination of sun at mean time of observation

Mean observed vertical angle

= 20°14'55.8" S.

Mean observed vertical angle to sun's center

= 28°05'45"

. Mean horizontal angle from reference point to sun's center

= 164°23'47"

True bearing to reference point

= N. 19942'47" W.

The lines were measured with a Lufkin steel tape, 300 ft. In length, graduated every foot for 279 ft. and the remaining foot graduated to tenths and hundredths; the tape was compared to an Invar standard tape at the beginning of the survey, and found to be correct. In addition to the steel tape, a Hewlett-Packard Model 3800 Infrared distance measuring unit was used to measure some of the lines. Its accuracy was checked against a line measured with the foregoing steel tape.

All lines and connections of this survey were run by direct methods.

The magnetic declination observed at each corner of the survey gave a uniform value of 14° E.

An interest in a common improvement described as follows:

A drilling program to explore these claims at depth.

As the terrain is extremely rugged and the potential ore is rather deep, surface drilling is the only logical way to explore and delineate the ore horizons.

Following is a list of drill holes describing each and giving its location within a particular lode and its value:

A drill hole, No. GA-1, bears N. 71° 13' E., 275 ft. dist. from Cor. No. 3 of the ELS-BETH No. 3 lode; 3 ins. diam. in size, 1,406 ft. deep. Value, \$9,800.

A drill hole, No. GA-2, bears S. 57°43' W., 297 ft. dist. from Cor. No. 1 of the ELS-BETH No. 3 lode; 3 ins. diam. in size, 511 ft. deep. Value, \$3,600.

A drill hole, No. GA-3, bears N. 81°20' W., 545 ft. dist. from Cor. No. 1 of the ELS-BETH No. 3 lode; 3 ins. diam. in size, 557 ft. deep.

Value, \$3,900.

Value of drill holes, \$17,300. Value of one-fifth interest, \$3,460.

Five hundred dollars or over has been expended in these improvements in such a manner as tends to the development of each lode of this survey subsequent to its location and to the time since which common ownership and contiguity have prevailed; therefore, an undivided one-fifth interest in their value is hereby credited to each of said lodes of this survey.

No portion of or interest in these improvements has been credited heretofore as patent expenditure to any lode claim.
