SUMMARY REPORT
GEOLOGIC MAPPING AND FIELD EVALUATIONS

This report is filed in compliance with the requirements of Title 30 United States Code 28-1 for mining claims described in the attached Affidavit of Annual Assessment Work.

The work performed during 1991 consisted of detailed geologic mapping and field evaluations of sites which had been previously identified through airborne geophysics. Mapping was conducted to determine each site's potential to contain a deep-seated collapse feature bearing economic mineralization. Regional mapping also was performed around the sites to provide a geologic framework in which to interpret the site-specific mapping results. Data obtained from the mapping program has served to define those sites of strongest potential, and will serve to prioritize further work within the claim block.

The work was conducted under the supervision of J. T. Cottrell, Senior Geologist for Pathfinder Mines Corporation. All technical work and results are in the possession of and are considered to be the exclusive property of the owner of the subject mining claims, PATHFINDER MINES CORPORATION, 935 North 1300 West, Suite 5, St. George, Utah 84770.

Dated and signed this 13th day of December, 1991.

Dec 23 2 18 PM '91

This report is filed in compliance with the requirements of Title 30 United States Code 28-1 for mining claims described in the attached Affidavit of Annual Assessment Work.

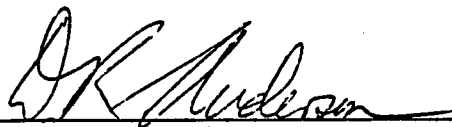

The work performed during August of 1991 consisted of a detailed geophysical survey and attendant analyses performed by K. O. Sweet, Consultant, as directed by Mark B. Mathisen, Senior Geophysicist for Energy Fuels, Ltd. and J. T. Cottrell, Senior Geologist for Pathfinder Mines Corporation.

The cost of the geophysical study exceeds \$2,650. The basic findings of this study are as follows:

Summary: A TDEM survey covering a portion of the claim block was performed to characterize the signature of a mineralized breccia pipe in the survey area. Analyses of the survey results with respect to drilling results and previous surveys indicates that the survey should be expanded over a large area to fully reveal the near surface geology.

All technical work and results are in the possession of and are considered to be the exclusive property of the owner of the subject mining claims, PATHFINDER MINES CORPORATION, 935 North 1300 West, Suite 5, St. George, Utah 84770.

EXHIBIT A
SUMMARY REPORT
GEOLOGIC MAPPING AND FIELD EVALUATIONS

This report is filed in compliance with the requirements of Title 30 United States Code 28-1 for mining claims described in the attached Affidavit of Annual Assessment Work.

The work performed during 1991 consisted of detailed geologic mapping and field evaluations of sites which had been previously identified through airborne geophysics. Mapping was conducted to determine each site's potential to contain a deep-seated collapse feature bearing economic mineralization. Regional mapping also was performed around the sites to provide a geologic framework in which to interpret the site-specific mapping results. Data obtained from the mapping program has served to define those sites of strongest potential, and will serve to prioritize further work within the claim block.

The work was conducted under the supervision of J. T. Cottrell, Senior Geologist for Pathfinder Mines Corporation. All technical work and results are in the possession of and are considered to be the exclusive property of the owner of the subject mining claims, PATHFINDER MINES CORPORATION, 935 North 1300 West, Suite 5, St. George, Utah 84770.

Dated and signed this 13th day of December, 1991.

SUMMARY REPORT - EZ CLAIMS

This report is filed in compliance with the requirements of Title 30 United States Code 28-1 for mining claims described in the attached Affidavit of Annual Assessment Work.

The work performed during the period of September 1, 1989 through August 30, 1990 consisted of detailed geological surveys performed by Pathfinder staff geologists under the supervision J.T. Cottrell, District Geologist for Pathfinder Mines Corporation, a Michigan State University geology graduate with 14 years mineral exploration experience.

The cost of the geological studies together with physical work performed on the ground exceeds \$273,000. Assessment work was satisfied by: a) collection of multichannel resistivity and magnetic data via airborne survey; b) reduction of the data and presentation of contoured values in map form; c) identification and evaluation of anomalous areas; d) prioritization of geophysical anomalies based on drilling information on selected area; e) reinterpretation of aerial photography revealing surface geology formed an adjunct to the geophysical survey.

This work is dedicated primarily to the claims listed in Part 1 of Affidavit of Annual Assessment Work to which this Summary Report is attached. The basic findings of this study are as follows:

In excess of 4,800 ft. of mineral exploration drilling was performed. Geophysical parameters of the rock penetrated were collected in addition to lithologic descriptions. Drill sites were chosen based on surface and subsurface geology.

Geologic resource and economic reserve estimates were prepared for known mineralization. Evaluation of production feasibility was based upon geologic and economic factors.

All technical work and results are in the possession of and are considered to be the exclusive property of the owner of the subject mining claims, PATHFINDER MINES CORPORATION, 255 Glendale Ave Suite 26, Sparks, Nevada 89431.

Dated and signed this 18th day of December, 1990.
