Assessment work on the property consisted of general geologic mapping, verifying locations of land monuments, and collection of a few representative samples. Conducted extensive discussions in the field on options available to explore the property. It was determined that at least two types of mineralization occurs on the property: a near E-W shear zone with quartz veining along a contact within Precambrian granitic rocks, and a complex vein event resulting in a possible remobilization of once mineralized massive sulfide mineralization within a Precambrian schist. The actual age and nature of base metal mineralization is still indeterminate, and will need to be further investigated. Presence of old workings and a once developed town site give evidence of past production from the area.

Work was done with concentration on the TP#1 - TP#4 Claims during the period of August 16 - 17, 2017. Zsolt Rosta, consulting geologist, conducted the property examination and was accompanied also by Mr. Hu and Mr. Ho, representatives of owner.

A total of more than _____ Eight Hundred _____ and 00/100 DOLLARS (\$ 800.00) was expended in performing the work, or equivalent value added. The work was performed by Zsolt Rosta, Consulting Geologist
