Subject: Geologic Evaluation for section 9; East 1/2 Section 5 parts; of the west 1/2 Section 4 T16S R23E Gunnison Hills near Dragoon, AZ

Date: August 23, 2018

History and previous work:

Earlier this year I was asked to study the Smith land particularly sections 4 & 9 for favorable areas where economic minerals might lie. After concluding potential mineralized ground might exist. I recommended staking five- 20 acre unpatented claims in this area. These claims were then staked as the Casey, Chance, Cody, Kade, & Kalee. AMC 447887; AMC 447888; AMC 447889; AMC 447890; & AMC 4478891 respectively. The claims were located in the field on October 30, 2017 and filed in Cochise County on January 11, 2018 (see attached map)

Geologic work in the area.

The definitive geologic work for the Dragoon area is Cooper and Silver's 1964 USGS Professional paper #416 titled "*Geology and Ore Deposits of the Dragoon Quadrangle Cochise County, Arizona*"

These claims were staked SSE of the Texas Arizona mine and east of the Gunnison Hills fault. Excelsior's Gunnison copper deposit lies to the NW. The Dragoon Geology map shown below shows pieces of the Cambrian Abrigo formation outcropping in the SW part of section 4 & the south part of section 9, see map. (This is the most favorable copper mineral formation in the Johnson Camp mine's Burro Pit.) I field checked the Dragoon 1964 USGS map by walking the outcrops looking for the formations mineral and alteration, The USGS map seems to be fairly accurate. In the process of staking the five claims, had a good look at the whole property. GPS locations were plotted where needed and recording locations recorded with a GPS so they could be plotted on a map. Attached is a map, with the claims plotted and some geologic information plotted. I have studied the upper Abrigo FM(Cau) in the Dragoon district: 1) At Johnson Camp Burro Pit the unit is pasty white with dolomitic marble with meta-siltstone skarn copper bearing. 2) At Johnson Camp Copper Chief the (Cau) unit is weak containing clay and friable partially metamorphosed siltstones, copper bearing. 3) On the NW Casey claim on the Smith property, the (Cau) is highly metamorphosed to a hard dark brown meta-

siltstone containing high silica and iron. In some pieces the iron is concentrated to the point where it is magnetic. No copper was seen on these outcrops.

Mineralization and Structure.

The primary bounding structure just west of the claim group is the Gunnison fault striking N25°W in the claim area. According to Cooper & Silver the Gunnison Hills were pushed up late in the Tertiary. The district has had a lot of mineralization and alteration generated by a deep porphyry source. Copper- Zinc replacement (manto) deposits near Johnson yielded, by the end of 1959, about 1.13 MM tons valued at \$25.6 MM.

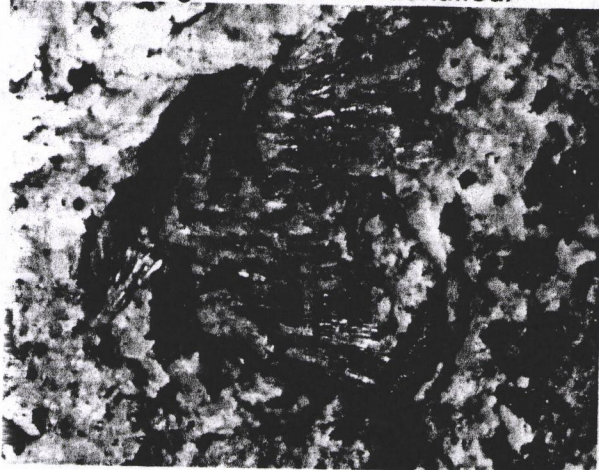

Later open pit oxide copper deposits (Burro & Copper Chief) were mined by Cyprus, Arimetco, and Nord. 1972- 2011. Excelsior is ready to ISL mine the Gunnison Project (5 billion lbs) behind the "Thing", SE of interstate 10.

The Texas Arizona Mine (lead-silver- zinc) closest productive mine to the Smith group lies directly to the north (~1400'). It is a vein and replacement deposit which produced 718 tons of 38.5% lead 49 ounces of silver, 1.6% copper and .05 of an ounce gold per ton. Most of the mineralization in the Texas Arizona formed in the Escabrosa formation as mantos (kidney shaped pods of ore replacing the carbonate). The Escabrosa FM. bedding in this area strikes N 25°W and dips 35°NE.

A portion of the Stroud Brothers Mine workings are located on the north end line of the Kalee and Chance claims. In 1911 they shipped a couple tons of high grade oxidized lead and silver ore from a NE trending shear zone in the Escabrosa formation. Pictured below a prospect hole trended N50E another larger cut (~200tons) trended N55W.

Mineralized areas show increased hematite staining for 10's of feet around the deposit. I found a heavy piece of the "ore" 100' south of the main cut. Strong limonite gossan with green-blue 2-12 mm rosettes contained within. I asked my friend Rolf Luetcke to look at this gossan under the microscope and identify any minerals if he could.

The following minerals he identified:

Auricalcite*, Calcite, Hematite 4mm FOV
*Zinc- Copper Carbonate

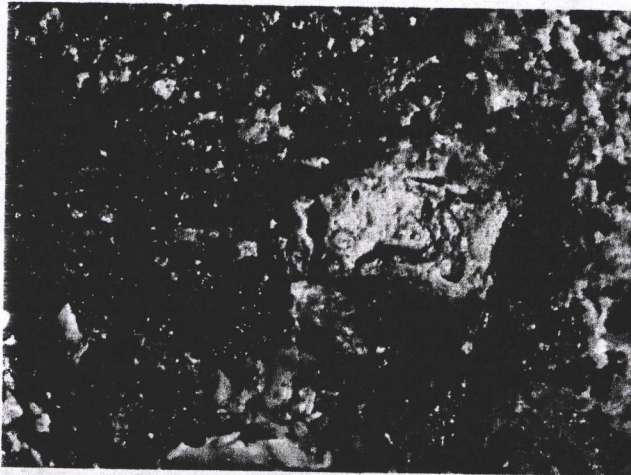

Calcite xls etched 4mm FOV

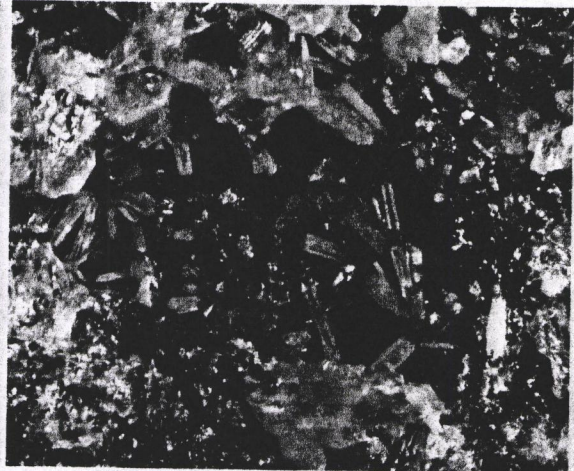

PHOENIX, ARIZONA

SEP - 4 A 11: 57

RECEIVED
AZ STATE OFFICE

Limonite, Hematite, & Auricalcite

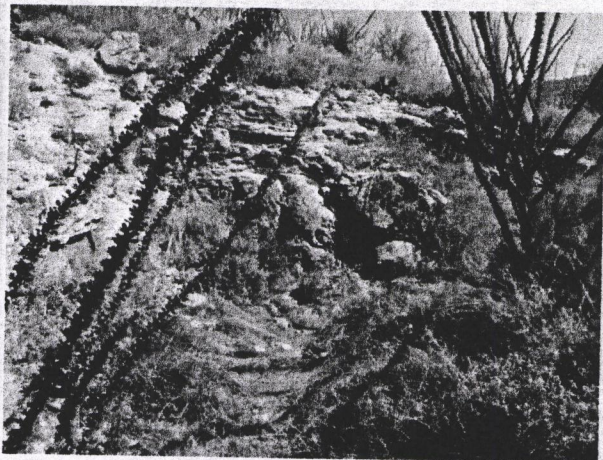

Willimite* xls, calcite, hematite, 4mmFOV
(zinc silicate*)

The Willimite looks exactly like the Willimite found at the Texas Arizona mine. No lead minerals were identified, often the lead is powdered oxide difficult to identify.

I found several pieces of greenish dike material with black 3-5 mm quartz "eyes" dike material but did not find the dike outcrop. The dike may have provided an active conduit to allow mineralization to take place.

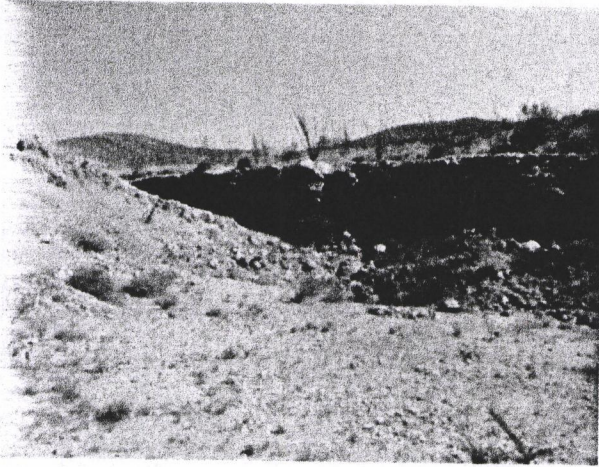

Stroud Mine Brush covered pit N50E 59N

Mineral cut ~200 tons N60E > FeOx.

On the SE area of the Chance claim is a "Pink" Marble Quarry exist, perhaps another shear zone in the Escabrosa FM., here rich hematite solutions apparently colored the marble in a shear zone. See photo's below.
