Find by Observation of Polaris the  
variation of my instrument to be

between and therefore impossible  
to connect them by courses and  
distances.

I select the highest point  
of a small hill in the center  
of a semi-circular mesa,  
about 3000 feet from the foot  
of the surrounding hills. A point  
that can be seen and easy  
of access from the surrounding  
hills. for the position of

From which point I take the  
following observations after care-  
fully adjusting my instrument.
