Shaft No. 1 of the Cumberland Lode is intended to and does develop the ledge on the North Star Lode. It is lower on the ledge than any point of the North Star claim, and therefore furnishes a convenient and economical means of developing the ledge on the North Star lode. An amount of \$100.00 is therefore assigned to the North Star lode.

The deep shaft No. 4 of the Cumberland lode develops in depth the Cumberland and Central Station lodes, and therefore \$150.00 of its values is assigned to the Central Station lode.

The stamp and concentrating mill on the Milligan claim was built to treat the ores from all the claims embraced in this survey, and it is essential for the proper development of the minerals within the confines of each claim, hence an assignment of \$250.00 to the Blue Jay Claim is made.

The discrepancy between the courses and lengths of the sides of the McLeod lode, lot No. 37, Pine Flat, as shown on the ground by the monuments and as designated similarly in my notes and on my plat, and as shown on the official plat of this survey as shown in the Land Office at Prescott, is due to errors in the latter.

This Survey was made with a Gurley Light Mountain Transit with a solar attachment. The courses were deflected from the true meridian as determined by solar observations. The distances were measured with a 200 foot steel tape.
