OTHER IMPROVEMENTS

A frame building, the East Corner of which bears
from Station A, N. 83° 05' W. 388 ft. Course of long
side, N. 36° 40' W.

A shaft, the center of which bears from Cor. No. 3,
S. 43° 11' W. 135 ft., which is the location shaft of
the Rincon lode, Detroit Copper Company, Claimant.

The surface embraced by this claim rises rapidly from
the Gulch on the Eastern end of the Puerto Rico,
South Westerly to about 200 ft. West of the end line
common to the two locations, to an elevation of from
four to five hundred feet, thence descending to the
Gulch across the Westerly end of the First Chance.
Tunnel No. 4 and tunnel No. 5 with a slight change in

their course would cut both claims at a considerable
 depth, which would be the most economical way to work
 the two claims together. From these tunnels to the
 Coronado Tramway is only about 600 ft. which would
 furnish a shorter and cheaper means of transporting
 of the ores to the reduction works than if this claim
 was developed in any other manner.

This survey was made with a Berger Light Mountain
 Transit. The courses were deflected from the true
 meridian as determined by polaris observations. The
 distances were measured with a 500 ft. tape.

An open cut, the face of which bears from a point
 on line B-C, 120 ft. from Cor. No. 2, N. 64° 30' E.
 100 ft. A ft. wide, 10 ft. face.

The distance embraced by this claim rises slightly from
 the level on the eastern end of the surface line.
 to about 20 ft. feet of the old line
 common to the two locations, to an elevation of 100
 to 150 feet above the level of the surface line.
 The distance embraced by this claim rises slightly from
 the level on the eastern end of the surface line.
 to about 20 ft. feet of the old line
 common to the two locations, to an elevation of 100
 to 150 feet above the level of the surface line.
