in this survey and Randolph No's.1,2,3,4,5,7,8,9,10,11,
12 & 13 lodes, unsurveyed, in all nineteen contiguous lodes

owned by the National Mining Exploration Co. The country is rolling and can only be developed at any considerable depth by sinking. This shaft is sunk near the center of the entire group of lodes, each and all of which can be advantageously developed from it with only one plant of machinery.

The disagreements between the field notes and the location certificates are due to errors in the latter.

Instrument.

This survey was made with a Berger Light Mountain Transit. The courses were deflected from the true meridian as determined by Polaris observations and their lengths measured with a 200 ft. steel tape.

Ledges.

The presumed position of the center of all the ledges co-incides with the center of the lodes as surveyed, as follows:

Bonita Lode, beginning at the center of the discovery shaft, running thence N. 54° 00' E. 781.37 ft. and S. 54° 00' W. 623.77 ft.
