The reasons for selecting the location of Improvement No 4 on the Mineral Farm No 1 of this survey for a common improvement are as follows; This point is a centrally located low point on this group of claims. From this point the ground gradually rises to the northwest, north, northeast and east. This point can be reached by a wagon road along a gulch running in from the south. The claims to the northwest, north, northeast and east are situated on hills, therefore drifts can be run from this shaft and gain greater depth for the purpose of developing all the ground embraced in this survey. For the above reasons it is believed that the shaft is well situated to develop all the claims to the best advantage, and for that reason it has been considered a common improvement, and an equal interest in same allotted to each claim of this survey.
