This Shaft being centrally located is a practicable and feasible main working shaft for the group.

The surface of the ground is rough, the gulches are not deep, however, and the bottom level in the main shaft is below the surface of all the claims of the group, and by drifting and cross-cutting in different directions, toward and under all the claims, the entire group may be advantageously developed and ore extracted therefrom.

This improvement is, therefore, a common improvement for the benefit of each lode of this group, and a 1/5 undivided interest of the total value of this improvement (\$6620.00) is properly accredited to each lode claim.
