## SURVEY NO. 4552B

1

XXXXX  
Feet

This survey was made with a K. & E. transit No. 51591, with horizontal limb 5.5 ins. diam., having two double opposite verniers, and full vertical circle 4.5 ins. diam. having one double vernier; the verniers read to one minute of arc; the instrument is equipped with a colored eye-shade to be attached for making direct observations on the sun. The instrument was in good condition at the time of the survey and all adjustments were in good order.

All azimuths in this record were determined by the method of horizontal-angles-right referred to the meridian established by direct observation on the sun. At 3:30 P. M. on Sept. 29, 1960 at the witness pt. for cor. No. 3 of the Whippoor-Will Hill Mill site, latitude  $34^{\circ}22'59.50''$  North, longitude  $112^{\circ}24'50''$  West; turning from a reference pt. about 300 ft. southwest clockwise to the sun in a southwest direction.

True bearing of reference pt. S.  $60^{\circ}13'20''$  W.

The lines were measured with a Lufkin steel tape, 300 ft. in length graduated every foot for 299 ft. and the remaining foot graduated to tenths and hundredths. The tape was compared to a standard at the beginning of the survey and found to be correct. All lines and connections of this survey were run by direct methods.

The magnetic declination observed at each corner of the survey gave a uniform value of  $14^{\circ}00'$  East.
