Township 16 S. range 13 E.

Gila and Salt River Meridian

General Description.

This township is excellent for grazing purposes; the surface is covered with the most nutritious grasses throughout its extent.

The N.E. cor. $\frac{3}{4}$ E. edge of the township lies in the Santa Cruz bottom, of which the land is very rich. Scattering timber is found over the township, but along the E. side and over the N.E. cor. the Mesquite is very heavy, and the brush very thick - in places almost impenetrable, - with pretty good plots of from 10 to 20 acres in extent, in the midst of the timber. Water is found in wells in the bottom along the road, and there is a spring stream in secs. 2 & 11.
