## General Description

This township is mostly good for grazing purposes, and a strip along the Eastern portion, E. of the road from Tucson to Tubac, lying in the Santa Cruz bottom, has very rich soil, capable of producing the largest crops. Water only runs along this portion of the Santa Cruz in the rainy season and now rises in holes along the valley but can be procured any where in the bottom by sinking wells a short depth. There is scattering Mesquite timber,  $\frac{1}{2}$  Pale Verde and Mesquite brush, Sycamores and all other varieties of Cacti throughout the township.
