Note

The rocks at 8½ and
9 mile corners are

BOOK 1774

Slightly under standard size also those at $14\frac{1}{2}$, 15 & $15\frac{1}{2}$ mile corners. These points are inaccessible to wagon; the rocks were the best that could be found after diligent search for a radius of one half mile in each case. After diligent search I could find no other section or $\frac{1}{4}$ section corners in T₄ 18 S. R 21 E other than that given by course and distance from 7 mile cor

BOOK 1774

General Description.

This land grant is found in the San Pedro Valley Cochise County Arizona.

The initial point of the survey is near the east bank of the San Pedro River about $\frac{1}{2}$ mile south of town of Fairbank, the station for both the N.M. and Ariz. and the Ariz. & South Eastern R. Roads whence stages depart for Tornostan nine miles east.

The valley is broad at this point but

Contracts and
then ridges both
north and south
of Fairbank. It is
traversed by both
of the rail roads
mentioned: Well
travelled wagon roads
follow the river
on both sides

The grant as sur-
veyed includes 17355.86
acres

The flat land along
the river - varying
in width from a few
hundred yards to a
mile and a half - is
occupied by settlers
who farm successfully

by means of irri-
gation.

Back from the
flat land are mesas
much cut up by
gorges and washes
running toward
the river. These
bluffs as well as
the flat land are
covered with dense
brush, mesquit
catsclaw and
greasewood.

Native grass is
found everywhere
alfalfa flourishes
where irrigated

At Jos. Curtis' ranch
about 200 ft. N. of grant

There is an artesian well.
Besides the town
of Fairbank, which
contains about 150
people, and the
line of farms noted;
there is at the
south end of the grant
the old mill town
of Charleston, now
practically abandoned.
The Cobin and Gird
mills stand there un-
used.

Just north of Fairbank
is the Grand Central
mill, unused; and
about 3 miles further
north is the Contention
mill also idle.

Nearby are the remains
of old town of same
name still contain-
ing a few families

Between Fairbank
and Charleston is
the building of the
old Boston Mill

These mills were
supplied with ore
from the mines
of Tombstone when
they were operated

At the southeast
cor. of the grant
there are a number
of mining claims
The variation of the
needle is generally
 $12^{\circ} - 30'$ East but in

OFF

vicinity of these
mining claims the
needle is consider-
ably affected.

There is no timber
on the grant except
ing the cottonwoods
which grow along
the river, at intervals.
There were no other public land monu-
ments found except those given.

Tombstone Ariz.

CIVIL ENGINEER.

U. S. DEPUTY MINERAL SURVEYOR,
OFFICIAL SURVEYOR COCHISE COUNTY.

Tombstone, Arizona, 12/21/99

Hon Geo Christ
U. S. Surveyor General
Tucson

Dear Sir:-

I send you by express the field notes of the survey of the San Juan de las Boguillas y Nogales Land Grant

You will note that Deputy Peels in this survey ran a center line up and down the valley and from that line established the eight angle corners calculating theoretical boundary lines that would include the given area, which area was later confirmed by the Court. Then he ran boundary lines connecting these corners. In each case these connecting boundary lines differed very materially from the theoretical distances which he had calculated.

In his notes he accounts for these errors by the fact that the center line from which these theoretical lines were deduced was measured over comparatively level and unobstructed ground while the boundary lines were over ground rough broken and brushy.

These erroneously measured lines, however, appear in the

CIVIL ENGINEER.

U. S. DEPUTY MINERAL SURVEYOR,
OFFICIAL SURVEYOR COCHISE COUNTY.

Tombstone, Arizona,

Plat and notes and in the instructions from the court I found by calculation that as Deputy Bell's notes show that line would not "close", in other words to execute a survey on the distances given is an impossibility; while on the other hand the theoretical distances close very satisfactorily.

I made a preliminary survey of the grant and after diligent search failed to find a single corner. Hence knowing the starting point you will see my only course was to run the boundary line upon the course indicated which closed most satisfactorily and gave the correct area.

Should you deem it important to incorporate this statement in my notes will you kindly have the same done and oblige

Yours truly
J. A. Rockfellow
U. S. Dep. Surveyor

Final Oath of U. S. Deputy Surveyor.

I, John B. Rockefeller

U. S. Deputy Surveyor, do solemnly swear that in
pursuance of a contract received from Royal A.
Johnson, United States Surveyor-General for Ari-
zona, bearing date of the 6th day of

October 1899, I have well, faith-
fully, and truly, in my own proper person, and in
strict conformity with the instructions furnished by
the United States Surveyor-General for Arizona,
the Manual of Surveying Instructions, and the
laws of the United States, surveyed all those parts

or portions of the Boundaries

and connecting lines
of the San Juan
de las Boyquillas y
Boyalis

of the Gila and Salt River Base and Meridian, in
the Territory of Arizona, as are represented in the
foregoing Field Notes as having been surveyed by
me and under my direction; and I do further
solemnly swear that all the corners of said surveys
have been established and perpetuated in strict
accordance with the Manual of printed instructions,
the special instructions of the United States Sur-
veyor-General for Arizona, and in the specific

88

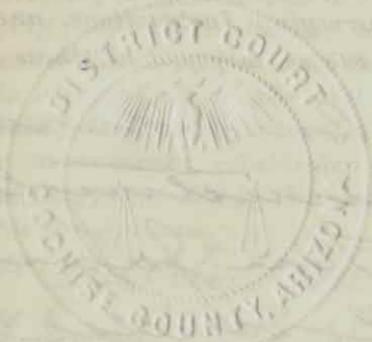

manner described in the field notes, and that the foregoing are the true Field Notes of such survey; and should any fraud be detected I will suffer the penalty of perjury, under the provisions of an act of Congress approved August 8, 1846.

John A. Rockfellow
U. S. Deputy Surveyor.

Sworn to and subscribed before me this 21st

day of December, 1899.

A. H. Emanuel,
Clerk.

County of Cochise } S.S.

Geo. G McGee makes the following statement:

I have been familiar with the region about the junction of the Babacomari Creek and San Pedro River, in Cochise County Ariz since the spring of 1880. On February 1881 the said creek joined the San Pedro at a point a few hundred feet below the present bridge of the N.M. & Ariz. R.R. An adobe house then stood where the ruins now are found within the boundaries of said rail road fence about 300 ft. east of the river. To the best of my knowledge and belief this was the only building within one fourth of a mile of the said river and creek junction.
