General Description.

T. 26 N., R. 7 W., is rough, broken and mountainous in the Eastern, and smooth, level or gently rolling in the Western parts.

The higher or Eastern portion lies on a broken mesa about 1800 ft. above the valley to the west, and is covered mostly with a fair growth of cedar, pinon and some pine trees large enough for timber

All of the Tp. is good grazing land, being well covered with native grass in the Eastern part, with some dark gramma grass in the western part.

The rock formation is a limestone conglomerate, overlying several strata of red sandstone, which outcrops in the deeper gulches.

The soil in the valley in the western part is a fertile sandy loam, which would produce well if watered. There is no water available for irrigation, as several old wells now dry, indicate that water is at a greater depth than 200 ft.

The pine Springs Cattle Co. has piped water for watering cattle from their wells some ten miles to the north, and built good concrete tanks a log house, and corrals in sec. 7.

There are no settlers living on any land in the Tp.
