PRELIMINARY OATHS OF ASSISTANTS.

WE, Fred L. Warner and Charles A. Dutton do solemnly swear that we will well and faithfully execute the duties of chainmen; that we will level the chain upon even and uneven ground, and plumb the tally pins, either by sticking or dropping the same; that we will report the true distances to all notable objects, and the true lengths of all lines that we assist in measuring, to the best of our skill and ability, and in accordance with instructions given us, in the survey of The East and North boundaries of M. No. 2576, P. No. 21 E., of the G. & S. R. Base and Meridian, Arizona.

Fred L. Warner, Chainman.  
Charles A. Dutton, Chainman.

Survey commenced June 29<sup>th</sup> 1910 and executed with a Young & Sons light mountain transit No. 10 with a Smith Solar attachment. The horizontal limb is provided with two double verniers, placed opposite to each other reading to single minutes of arc, which is also the least count of the verniers of the latitude and declination arcs.

Examine the adjustments of the transit and find them to be perfect, and know from recent tests of the solar apparatus, by comparing its indications resulting from observations made on the sun during a.m. and p.m. hours, with a meridian established by observations on Polaris, that the instrument is in satisfactory adjustment.

Begin at the Standard Cor. of Twp. 25 N., R 21 and 22. E. described in Standard Book "I" which I re established June 28<sup>th</sup> 1910., Latitude 35° 30' 33" N. Longitude 110° 03' W.

June 29<sup>th</sup> 1910. At 8<sup>h</sup> 30<sup>m</sup> a.m. <sup>1. mt.</sup> set off 35° 30' N. on the lat. arc. 23° 16 1/2' N. on the decl. arc. and determine a meridian with the solar at the above mentioned cor. Thence I run.

General Description.

This township consists of a high stony mesa land in the southern part; it is rolling in the central and northern parts. Nearly the entire township is prairie land, producing an abundance of grass. The township is poorly watered and has very little timber on the mesa portions.

Much water from the summer rain fall could be stored in natural basins at a small expense thus affording water for a great many head of sheep. The township should be subdivided.
