Survey commenced Dec. 20, 1910 and executed with a W. & L. E. Gurley engineers transit No 76 with a Burt Solar attachment, the horizontal limb is provided with one double vernier reading to single minutes of arc. The verniers of the latitude and declination arcs read to 0' 30" of arc.

I examined the adjustments of the transit and find them correct and know from recent tests of the solar apparatus by comparing the results of observations made on the sun during a.m. and p.m. hours. with a meridian determined by observations on Polaris, that the instrument is in satisfactory adjustment.

I begin at the cor. of N<sup>os</sup> 30 and 31 N, R<sup>s</sup> 15 and 16 E. estab. by Sidney E. Blout May 12, 1909

which is an iron post 3 ins. in diam. 12 ins. above ground. firmly set marked <sup>on brass cap</sup> T 31 N. in N. half and T 30 N. in S. half, R15 E S 36 in N.W., R16 E S 31 in N.E., R16 E S 6 in S.E. and, R15 E S 1 in S.W. quadrant. from which a pinion pine 10 ins. in diam. bears N 82° E 107 lks. dist. marked T 31 N. ### General Description

This township is rough and broken in the northern and north western parts., rolling in Eastern, Central, and southern parts. with very little level land. The land is generally a high rolling prairie country covered with a good growth of bunch grass and sage brush.

The township is poorly watered and timbered with scrubby cedar and pines, fine suitable only for wood for fuel.

The township should be surveyed on account of the grazing facilities it affords.
