Survey commenced Feb. 1, 1915, and executed jointly by Woodbury Abbey, U. S. Surveyor, and Roy J. Gill, U. S. Transitman, on the dates shown on page 29 of this book.

A description of the instruments used, with record of approval by the assistant supervisor of surveys and field tests appears in Book "B."

All lines were originated by deflection from the secant, on the G. and S. R. Base Line, a record of which appears in Book "A"; and from a meridian determined by direct altitude observation on the sun, at the cor. of secs. 15, 16, 21 and 22, a record of which follows herein; lines being projected by means of fore and back sights and carefully measured angles.

Altitude Observation on Sun for Meridian- Roy J. Gill, Observer.

Station, cor. of secs. 15, 16, 21 and 22.

Latitude, $33^{\circ}25\frac{1}{2}'$.

Longitude, $114^{\circ}07' W.$

Declination, $14^{\circ}52'14" S.$

Date, Feb. 9, 1915.

Reference point, assumed East; angle read to right to sun.

Local Mean Time	Horizontal Angles	Vertical Angles
0 8h 20m	$30^{\circ}29'$	$15^{\circ}59'$ (1)
0 8h 26m	$32^{\circ}01'$	$17^{\circ}31'$ (6)
0	$31^{\circ}11'$	$16^{\circ}07'$ (2)
0	$31^{\circ}18'$	$17^{\circ}21'$ (5)
0	$30^{\circ}48'$	$16^{\circ}19'$ (3)
0	$31^{\circ}46'$	$17^{\circ}15'$ (4)

Mean azimuth of sun, deduced from the above series, is $29^{\circ}22'$ E. of S.; which gives for the bearing of reference point, $S.89^{\circ}59'$ E.; which is within the probable degree of accuracy of the observation.

The magnetic bearing of the true meridian, at 8h 30m a.m. l.m.t., is $N.14^{\circ}30' W.$ The angle thus determined gives the mag. decl. $14^{\circ}30'$ E.

I begin at the standard cor. of secs. 35 and 36, on S. bdy. of Tp. (G. and S. R. Base Line), described in Book "A".

Thence $N.0^{\circ}01' W.$, bet. secs. 35 and 36, over rough mountainous land, through scrub timber and dense undergrowth. Descend.

 The land North of the cor. of secs. 23, 24, 25 and 26 being so rugged and precipitous that it is impracticable to chain over or set flag on line, and triangulation or traverse being impracticable, I note a well defined and easily identifiable point on a high ridge approximately 30 chs. N.0°01'W. of the cor., and proceed to the cor. of secs. 13, 18, 19 and 24, on E. bdy. of Tp., described in Book "B."

Thence with the bearing of the S. bdy. of sec. 24, S.89°58'W., on a random line, bet. secs. 13 and 24.

 41.05 In order to pass cliffs, I traverse as follows:
 South, 3.22 chs.
 S.74°30'W., 28.25 chs.
 North, 10.75 chs.;
 which gives a westing of 27.22 chs. and a southing of 2 lks., making the station S.89°58'W. of sec. cor. 68.27 chs.

80.00 Thence S.89°58'W., on random.
 (Counting from sec. cor.) I set off S.0°01'E., and note that line falls E. of foresight on ridge N.0°01'W. of the cor. of secs. 23, 24, 25 and 26, hereinbefore described.

80.22 Foresight above mentioned bears S.0°01'E.

GENERAL DESCRIPTION.

The south east portion of this township lies in the NW. portion of the S.H. mountains, which are for a considerable portion, extremely rugged and precipitous. The north and west parts of the township are rolling and level, being part of la Posa plain. The main drainage is to the west and north west.

The soil in the mountainous regions is rocky; 4th rate; and in some parts of the plains is of fair quality, though lack of water renders it unproductive, except as to desert growth, such as mesquite, paloverde, catclaw, ironwood, greasewood, cactus and sagebrush.

The township contains no permanent water and no settlers.
