BOOK 3061

FIELD NOTES

OF THE SURVEY OF THE

North, East and West boundaries, and

Subdivision Lines of

TOWNSHIP 26 NORTH, RANGE 3 WEST,

and RESURVEY of

South boundary of

TOWNSHIP 26 NORTH, RANGE 3 WEST,

Of the Gila and Salt River Base and Meridian,

In the State of Arizona.

EXECUTED BY

John F. Hesse, U.S. Surveyor

and

Heber P. Purington, U. S. Transitman,

~~In the capacity of U. S. Surveyor~~, under instructions dated March 4, 1915, issued by the United States Surveyor General to govern surveys included in Group No. 53, which were approved by the Commissioner of the General Land Office, December 14, 1915.

Survey & ReSurvey commenced October 13, 1916

Survey & ReSurvey completed November 25, 1916

Executed under Assignment
Instructions dated September 28, 1916 and December 18, 1916.

Resurvey of S. Bdy. of T. 26 N., R. 3 W.
Subdivision of T. 26 N., R. 3 W.

chains.

Surveys executed by John F. Hesse, U. S. Surveyor, using an A. Lietz light mountain transit No. 6166, and Heber P. Purington, U. S. Transitman, using a Young and Son light mountain transit No. 8533 and Young and Sons solar compass No. 8233, the instruments being equipped with solar attachments.
The instruments are equipped with two double verniers placed opposite to each other, and reading to single minutes of arc, which is also the least count of the verniers of the latitude and declination arcs.
The instruments were approved by the Assistant Supervisor of Surveys, District No. 5, conditional upon subsequent satisfactory field tests.

Instrument No. 6166 was tested on a true meridian determined by observations on Polaris, a record of which follows:-

October 20, 1916, at camp near the $\frac{1}{4}$ sec. cor. bet. secs. 21 and 28, T. 26 N., R. 3 W., lat. $35^{\circ} 37\frac{1}{2}'$ N., long. $112^{\circ} 36'$ W., I examine the adjustments of the transit and find them correct. Then to test the solar attachment, by comparing its indications resulting from observations made during a.m. and p.m. hours on a meridian established by observations on Polaris, I proceed as follows: At 5 hrs. 30 m., p.m., l.m.t., I observe Polaris at eastern elongation in accordance with instructions in the manual of surveying, and turn off the azimuth of Polaris, $1^{\circ} 24'$ to the west. I mark the meridian thus determined by a tack driven in a stake, set firmly in the ground, 5 chs. north of my station.

October 21, 1916. At 5 hrs. 27 m., p.m., l.m.t., I again observe Polaris at eastern elongation and find that the observations check.

October 25, 1916. At 9 hrs. 0 m., a.m., l.m.t., I set off $35^{\circ} 37\frac{1}{2}'$ N. on the latitude arc; $12^{\circ} 7\frac{1}{2}'$ S. on the decl. arc; and determine a meridian with the solar. The meridian thus determined coincides with the meridian established by observations on Polaris.

At 3 hrs. 0 m., p.m., l.m.t., I set off $35^{\circ} 37\frac{1}{2}'$ N. on the lat. arc; $12^{\circ} 12\frac{1}{2}'$ S. on the decl. arc and determine a meridian with the solar. The meridian thus determined coincides with the meridian established by observations on Polaris. I therefore conclude that the adjustments of the transit and solar attachment are satisfactory.

Instruments No. 8533 and 8233 were frequently tested on the established meridian and adjustments made, to insure results to be well within the prescribed allowable limits.

Clinometers and 5 chain steel tapes, were the instruments employed in determining all measurements.

General Description.

This township is nearly all level and rolling land, except where the mesa breaks to the east through the approximate center of the township in a northerly and southerly direction, and in the north west corner, where it breaks to the west. The drainage is to the north. The soil varies from sandy and gravelly clay, 1st rate, to rocky, 4th rate. Scattering cedar and pinion timber is found throughout most of the township, except in the NE. corner. The undergrowth consists of algerita and sagebrush. There are no settlers nor is there any living water.
