TEST OF INSTRUMENT, BY WILLIAM L. NASH, U.S. TRANSITMAN.

Examine the adjustments of instrument No. 8535, and correct all errors; then, to test the solar apparatus, by comparing its indications, resulting from solar observations made during a.m. and p.m. hours, with a meridian determined by observations on Polaris at elongation, proceed as follows:-

July 9, 1917. At camp, in sec. 27, T. 26 N., R. 3 E., in lat. $35^{\circ} 35' N.$, long. $112^{\circ} 3' W.$, at 0 hrs. 26.5 m., a.m., l.m.t., by watch, which is set to correct local mean time, observe Polaris at eastern elongation, in accordance with the Manual of Instructions, and mark a point in the line thus determined by a tack driven in a stake, set in the ground, 5 chs. N. of my station.

July 10, 1917. At 7 hrs. 0 m., a.m., l.m.t., lay off the azimuth of Polaris, $1^{\circ} 23\frac{1}{2}'$ to the west, and mark a point in the meridian thus determined, by a tack driven in a stake set in the ground, 5 chs. N. of station.

At 8 hrs. 0 m., a.m., l.m.t., I set off $35^{\circ} 35' N.$ on the lat. arc; $22^{\circ} 29' N.$ on the decl. arc; and determine a meridian with the solar. The line thus determined coincides with the meridian determined by observations on Polaris at elongation.

At 4 hrs. 0 m., p.m., l.m.t., set off $35^{\circ} 35' N.$ on the lat. arc; $22^{\circ} 20' N.$ on the decl. arc; and determine a meridian with the solar. The line thus determined coincides with the true meridian determined by observations on Polaris at elongation.

The solar apparatus, by a.m. and p.m. observations, defines positions for meridians which coincide with the meridian determined by observations on Polaris at elongation; therefore, conclude that the adjustments of the instruments are satisfactory.

General Description.

This township consists of gently rolling and rolling land, covered with a scattering growth of sagebrush, squaw brush and broom weed undergrowth, and cedar, pinion and juniper timber. The soil is a loose, rocky loam, of coarse texture, 10 to 26 ins. in depth.

There are no settlers. Several earth dams have been constructed in draws, for the impounding of flood waters.

Diagram showing the respective surveys executed by Thomas B. Matthews, U.S.S., and William L. Nash, U.S.T., under instructions for Group No. 55, Arizona.
