Retracement and resurveys executed by John F. Hesse, U.S. Surveyor, on dates shown on diagram on page 36 hereof, using an Abt-Zietz light mountain transit No. 6166, with solar attachment. The horizontal limb is provided with two double verniers placed opposite to each other, reading to single minutes of arc, which is also the least count of the verniers of the latitude and declination arcs. The instrument was approved by the Assistant Supervisor of Surveys for Arizona and California, October 18, 1915, conditional upon satisfactory field tests. I examine the adjustments of the transit, and correct all errors; then, to test the solar apparatus, by comparing its indications, resulting from solar observations made during a.m. and p.m. hours, with a meridian determined by observations on Polaris, I proceed as follows: Mar. 20, 1916; At the cor. of T. 2 & 3 S., R. 7 & 8 E.; latitude, 33° 12' 07" N., longitude 111° 35' 00" W.; I set off 33° 12' N. on the lat. arc; 0° 04' N. on the decl. arc; and, at 5h. 00m. p.m., l.m.t., determine with the solar a meridian and mark a point thereof, on a stone firmly set in the ground, 5 chs. N. of the cor. At 7h. 34m. p.m. by my watch, which has correct l.m.t., I observe Polaris at western elongation in accordance with Manual of Instructions, and mark a point in the line thus determined, on a peg driven in the ground, 5 chs. N. of my station.

March 24, 1916.
 At 6h. 30m. a.m., l.m.t., I lay off the azimuth of Polaris, 1° 21½' to the east, and mark the meridian thus determined, by cutting a small groove in the stone set March 20, on which the meridian falls 0.3 ins. east of the mark determined by the solar.
 At 7h. 00m. a.m., l.m.t., I set off 33° 12' N. on the lat. arc; 1° 29' N. on the decl. arc; and mark a point in the meridian determined with the solar, by a cross on the stone already set 5 chs. N. of my station; this mark falls 0.2 ins. east of the meridian established by the Polaris observation.
 The solar apparatus by p.m. and a.m. observations, defines positions for meridians, respectively about 0' 16" West and 0' 11" east of the meridian established by the Polaris observations; therefore, I conclude that the adjustments of the instrument are satisfactory.
 The magnetic bearing of the true meridian, at 7h. 05m. a.m., is N. 14° 00' W.; the angle thus determined gives the mag. decl. 15° 00' E.
 At the cor. of secs. 34 and 35 on the S. bdy. of the Tp. I set off 1° 32' N. on the decl. arc; and observe the sun on the meridian at noon; the resulting lat. is 33° 12' N.
 During the execution of this resurvey, the adjustments of the solar attachment were repeatedly tested and verified on this meridian.
