Resurveys and Surveys hereinafter described, executed by Thos. B. Matthews, U.S. Surveyor, and Elmer F. Strickler, U.S. Transitman, on dates shown on page 53 hereof, using respectively Buff solar transit No. 10124, and Young and Sons' light mountain transit No. 8588, both instruments being equipped with Smith solar attachments. For description of instruments and certificate of approval, see Book "A."

Examine the adjustments of the transits and correct all errors; then, to test the solar apparatus, by comparing their indications, resulting from solar observations made during a.m. and p.m. hours, with a meridian determined by observations on Polaris, proceed as follows:

February 24, 1917.

At camp in sec. 14, T. 19 N., R. 11 E., in lat. $35^{\circ}2'N.$; long. $111^{\circ}12'W.$, at 9 h. 7.8m. p.m., l.m.t., by watch, set to correct local mean time, observe Polaris at western elongation, in accordance with the Manual of Instructions, and mark a point in the line thus determined by a tack in a stake, 5 chs. N. of station.

February 25, 1917. At 7h. 30m. a.m., l.m.t., lay off the azimuth of Polaris, $1^{\circ}23'$ to the east, and mark a point in the line thus determined by a tack driven in a stake, 5 chs. N. of station.

Placing each instrument on the meridian, at 8h. 0m. a.m., l.m.t., set off $35^{\circ}2'N.$ on the lat. arcs; $9^{\circ}6'S.$ on the decl. arcs, and determine a meridian with each instrument. Each meridian thus determined departs less than $1'$ from the true meridian determined by observations on Polaris at elongation.

At 4h. 0m., p.m., l.m.t., set off $35^{\circ}2'N.$ on the lat. arcs; $8^{\circ}59'S.$ on the decl. arcs, and determine a meridian with each solar. Each meridian thus determined departs less than $1'$ from the true meridian determined by observations on Polaris at elongation.

The solar apparatus by a.m. and p.m. observations, define positions for meridians which depart less than $1'$ from the true meridian determined by observations on Polaris at elongation; therefore, conclude that they are in satisfactory adjustment.
