Part of the Boundary of the Hualpai Indian Reservation,

AND OF THE SURVEY OF

Part of the West Boundary, and

Part of the Subdivision Lines of

TOWNSHIP 32 NORTH, RANGE 6 WEST,

Of the Gila and Salt River Base and Meridian,

In the State of Arizona

EXECUTED BY

Dupree R. Averill, U. S. Surveyor,

and

James C. O'Brien, U. S. Transitman,

In the capacity of U. S. Surveyor, under Special Instructions dated February 24, 1920,
issued by the United States Surveyor General to govern surveys included in Group
No. 105, Arizona, which were approved by the Commissioner of the General Land
Office, March 8, 1920, and Assignment Instructions dated March 27, 1920

April 15, 1920, and
June 23, 1921.

Retracement & Survey commenced June 23, 1920, and July 2, 1921.

Retracement & Survey completed Aug. 26, 1920, and July 4, 1921.

TOWNSHIP 32 NORTH, RANGE 6 WEST,

See Book "E" for dates of execution of survey of this line.

Dotted Red lines indicate retracements and Solid Red lines on above diagram indicate surveys executed by Dupree R. Averill, U. S. Surveyor, on dates shown thereon.

Blue lines on above diagram indicate surveys executed by James C. O'Brien, U. S. Transitman, on dates shown thereon.

Retracement and survey hereinafter described, executed on dates shown on diagram on page 2 hereof, by Dupree R. Averill, U.S. Surveyor, and James C. O'Brien, U.S. Transitman, using respectively Buff solar transit No. 9223, and Young and Sons mountain transit No. 8541. Each instrument is equipped with full vertical circle, and the Smith solar attachment; unless otherwise specified, all azimuth determinations are accomplished with the solar attachments.

FIELD TEST OF INSTRUMENTS

Preliminary to 1920 work.

June 20, 1920: We examine the adjustment of each instrument, and correct all errors; then, to test the solar apparatus by comparing its indications from observations made during a.m. and p.m. hours with a meridian established by Polaris observation, proceed with each instrument as follows:

In camp in SE. $\frac{1}{4}$ of sec. 14, T. 31 N., R. 7 W., Gila and Salt River Base and Meridian, Arizona, in latitude $36^{\circ}04\frac{1}{2}'$ N., and longitude, $113^{\circ}00'$ W. at 7h. 37.9m. a.m., l.m.t., observe Polaris at upper culmination, making four observations, two each with the telescope in direct and reversed positions, and mark the mean point in the line thus determined on a peg driven firmly in the ground 5 chs. N.

At 8h. 00m. a.m., l.m.t., set off $36^{\circ}04\frac{1}{2}'$ N. on the lat. arc; $23^{\circ}27'$ N. on the decl. arc, and determine a meridian with the solar, which agrees with the true meridian.

At app. noon, with the lat. arc unchanged, observe the sun on the meridian; the resulting reading of the decl. arc is $23^{\circ}27'$ N., which agrees with the computed declination of the sun.

At 4h. 00m. p.m., l.m.t., with the lat. arc unchanged, set off $23^{\circ}27\frac{1}{2}'$ N. on the decl. arc, and determine a meridian with the solar, which agrees with the true meridian.

As all of the solar observations made with both instruments, during the usual hours of solar work come within $1'30''$ of the true meridian, we conclude that the adjustments of the instruments are satisfactory.

FIELD TEST OF YOUNG AND SONS TRANSIT NO. 8541.

Preliminary to work in 1921 by Dupree R. Averill, U.S.S.

July 1, 1921. I examine the adjustment of the instrument, and correct all errors; then, to test the solar apparatus by comparing its indications from observations made during a.m. and p.m. hours with a meridian established by Polaris Observation, proceed as follows:

In camp near the center of sec. 15, T. 32 N., R. 0 W., Gila and Salt River Base and Meridian, Arizona, in latitude $36^{\circ}10'$ N., longitude, $112^{\circ}55'$ W., at 0h. 56.3m. a.m., l.m.t., I observe Polaris at upper culmination making four observations, two each with the telescope in direct and reversed positions, and mark the mean point in the line thus determined, on a peg driven firmly in the ground 5 chs. N.

At 8h. 00m. a.m., l.m.t., I set off $36^{\circ}10'$ N. on the lat. arc; $23^{\circ}08'$ N. on the decl. arc, and determine a meridian with the solar, which I find to agree with the true meridian.

At app. noon, with the lat. arc unchanged, I observe the

sun on the meridian; the resulting reading of the decl. arc is 23° 07' N., which agrees with the computed declination of the sun.

At 4h.00m., p.m., l.m.t., with the lat. arc unchanged, I set off 23°07'N. on the decl. arc, and determine a meridian with the solar, which I find to agree with the true meridian.

As all of the solar observations during the usual hours of solar work come within 1'30" of the true meridian, I conclude that the adjustments of the instrument are satisfactory.

Unless otherwise specified all measurements are made with a Lufkin steel tapes, 5 chains in length, compared with a Chesterman standard steel tape and found correct.

The measurements are made on the slope, the vertical angle determined, and the slope measurements properly reduced to true horizontal distances.

Retracement of part of the
Boundary of the Hualpai Indian Reservation (East line) 5

Chains.

The portion of the boundary of the Hualpai Indian Reservation retraced as hereinafter described, was surveyed by Albert T. Colton, U.S.D.S., in 1900, and no retracement or resurvey of such portion of the line is of record.

The 117 1/2 mile monument is a limestone 10x0x0 ins. above ground, firmly set, marked HIR 117 1/2 M on W. face, and PL on E. face, and witnessed by a mound of stone N. of mon. and two bearing trees as follows:

- A cedar, 14 ins. in diam., S. 77 1/2 ° W., 75 lks. dist.,
- A cedar, 6 ins. in diam., N. 50 ° W., 73 lks. dist.
- Each of the bearing trees marked HIR 117 1/2 BT.

Thence,
North, on a random line, on N. 1/2 of 118th mile.
Over rolling and broken land, thru. scattering timber and undergrowth, descending gradually over E. slope, on W. side of gulch, course N.

Intersect the closing cor. of those portions of secs. 13 and 24, situated outside the Reservation, which was established by William H. Thorn, U.S.S. in 1917. This cor. is an iron post, 2 ins. in diam., firmly set in a mound of stone, properly marked on brass cap, and witnessed by a mound of stone E. of cor. No bearing trees.

Continue line and measurement.
Descend 75 ft., over E. slope, to Gulch, course N. 5 ° W. Descend 62 ft., over W. slope, to Intersect the 118 mile monument, which is a sandstone, 10x10x8 ins. above ground, firmly set, marked H I R 118 M on W. face and P L on E. face, and witnessed by a mound of stone, N. of mon. No bearing trees. This monument is in bottom of same gulch, 100 lks. wide, course E. from SW. At about 2 chs. E., the gulch, turns N.
True course and dist. of N. 1/2 of 118th mile are therefore North, 39.90 chs.
Land, rolling and broken.
Soil, rocky and gravelly, 3rd rate.
Timber, scattering cedar.
Undergrowth, scattering sage brush.

No bearing trees.
The true course and dist. of the Reservation bdy. from 118 mile mon. to this W.C. are therefore North, 27.90 chs. This witness cor. is at the top of high steep cliffs, bearing NE. and SW., facing NW. rendering continuation of chaining on the line impracticable. The original survey of the Reservation boundary described this point as the terminus of the line; however, it becomes necessary in the proper execution of the survey of the subdivision lines of that portion of T. 32 N., R. 6 W.

Survey of part of the boundary of the Hualpai Indian Reservation.

Chains.

The following notes describe the extension of the survey of the East bdy, of the Hualpai Indian Reservation, in order to properly close the survey of those portions of secs. 12 and 13, T32 N., R.6 W., situated inside the Reservation.

From the witness cor. to the 118 1/2 mile monument, hereinbefore described, which is 27.90 chs. N. of the 118th mile mon., North, on true line, completing survey of the 119th mile. Over mountainous land, thru. scattering undergrowth. Descend over high cliffs, facing NW. Chaining being impracticable, triangulate as described, as follows, and as shown on the diagram hereon:

Leave flag at witness cor. From a point N. of flag and 89° 58' N. of cor. of secs, 11, 12, 13 and 14, measure a Base East 4.81 chs.

From East end of base, flag brs. S. 9° 11' W.

Vertical angle from W. end of base to flag = + 35 1/2°.

Included angles are 80° 49' 9" 11' and 90° 00', the sum of which is 180° 00'.

Triangulated dist. on Reservation bdy. is obtained by Tang. 80° 49' x Base or 6.18559 x 4.81 = 29.75 chs.

12.10 118 1/2 mile point is inaccessible.

29.75 Triangulation point, also point for closing cor. of secs. 12 and 13.

This point is 1400 ft. below witness cor. to 118 1/2 mile mon.

Continue line and measurement by chaining.

Triangulation point. E. rim of Mohawk Canyon, brs. NE. and SW. Leave rolling, and enter mountainous land. The line beyond this point passes over steep high cliffs on E. wall of Mohawk Canyon, and chaining is impracticable; therefore, triangulate as described as follows, and as shown on the diagram hereon:

Set flag at 48.90 ch. station. From point ahead on Tp. bdy., measure a Base west 2.50 chs. which is as long a base as it is practicable to chain. From W. end of Base, flag brs. S. 9°20' E. Included angles are 80°40', 90°00' and 9°20', the sum of which is 180°00'.

Triangulated dist. on Tp. bdy. is obtained by Tang. 80°40' x Base or 6.08444 x 2.50 = 15.21 chs., which added to 48.90 chs. gives 64.11 chs. N. from Tp. cor. for the position of the triangulation point.

64.11

Triangulation point. Continue steep descent over cliffs facing NW. Chaining is impracticable; therefore make another triangulation as described as follows, and as shown on the diagram hereon:

Set flag at 64.11 ch. station. From point ahead on Tp. bdy., measure a Base, West 39.29 chs. From W. end of Base, the flag at 64.11 ch. station, brs. S. 68°04' E. Included angles are 21°56', 90°00' and 68°04', the sum of which is 180°00'.

Triangulated dist. on Tp. bdy. is obtained by Tang. 21°56' x Base or .40207 x 39.29 = 15.82 chs.; which added to 64.11 chs. gives 79.93 chs. N. from Tp. cor. for the position of the triangulation point.

The line beyond this point passes over high, precipitous cliffs, rendering chaining impracticable; therefore, triangulate and offset, as described as follows, and as shown on the diagram hereon:

Set flag ahead on Tp. bdy. at top of cliffs, facing SW. After survey of Subdivision line bet. secs. 7 and 18, T. 32 N., R. 6 W., determining the same to be N. 89° 46' E., 79.07 chs., use said line as a base for this triangulation.

The subdivision lines of that portion of the S. $\frac{1}{2}$ of T. 32 N., R. 6 W., situated outside the Hualpai Indian Reservation, were surveyed in March and April, 1917, by William H. Thorn, U.S.S., who surveyed the lines W. from the sec. cors. on the E. boundary of the Tp., and established closing cors. at the points of intersection on the boundary of the Reservation.
 The following notes describe the survey of the completion of such lines, beginning at the closing cor. on the H.I.R. boundary.

The closing cor. of that portion of the S. $\frac{1}{2}$ of secs. 25 & 36, situated outside the H.I.R. is an iron post, 2 inches in dia. firmly set in ground, and in mound of stone, properly marked on brass cap, and witnessed by two properly marked bearing trees,

To secure a suitable point from which to triangulate, begin at the witness cor. to cor. of secs. 1, 2, 11 and 12, indicated on diagram at "A."

Thence, S. 3° 00' W., 1.67 chs. on traverse in sec. 11 to point "B."

Thence, N. 48° 30' W., 4.25 chs. to point "C," which is plainly visible from the temp. closing

cor. of secs. 1 and 12 on the bdy. of the Hualpai Indian Reservation, and also, from the S. end of a base measured on the Reservation bdy. as hereinafter described.

The computed westing of the traverse "ABC" = 3.27 chs.

The computed northing of same = 1.15 chs.

The westing and northing of a tie from point "A" to sec. cor. point is 1.35 chs., and 2.10 chs. respectively; therefore, the westing and northing of a tie from point "C" to sec. cor. point is 4.62 chs., and 0.95 chs. respectively.

Point "C" is therefore 0.95 chs. S. from a point on sec. line extended thru. point for cor. of secs. 1, 2, 11 and 12, at 4.62 chs. N. 89° 58' W. from said sec. cor. point.

Triangulate measurement from traverse point "C," to a point S. 89° 58' E., therefrom, on the bdy. of the Hualpai Indian Reservation, as follows:

Leave flag at traverse point "C."

At point "D," on H. I. R. bdy., bearing S. 89° 58' E. from "C" is 0.77 chs. S. from the temp. closing cor. of secs. 1 and 12, previously set at 80.00 chs. N. from closing cor. of secs. 12 and 13, as hereinbefore described, and is therefore 79.23 chs. N. from the latter.

From point "E" on H. I. R. bdy. on top of spur, 12.40 chs. N. from closing cor. of secs. 12 and 13, the flag at traverse point "C" brs. N. 37° 00' W.

The length of the Base "DE" is 79.23 chs. - 12.40 chs. = 66.83 chs.

Included angles of the triangle "CDE" are 52° 58', 90° 02' and 37° 00', the sum of which is 180° 00'.

Triangulated distance from "C" to "D" is obtained by $\frac{\sin 37^{\circ} 00'}{\sin 52^{\circ} 58'} \times \text{Base}$ or $\frac{.60182 \times 66.83}{.79829} = 50.38$ chs.

Line "CD" being parallel to and 0.95 chs. S. of sec. line bet. secs. 1 and 12, and 4.62 chs. in excess of length over said sec. line the true length of said sec. line is 50.38 chs. - 4.62 chs. = 45.76 chs.

The approximate positions of the topographical features on the sec. line measured from the true point for cor. of secs. 1, 2, 11 and 12 are as follows:

Latitude and departure of "A-B" = 0.99 chs. S. and 11.34 chs. E. Point "B" is therefore 0.99 chs. S. of 72.00 ch. station on random line. From point "B," S. 89° 59' E., 3.58 chs. to point "D," which is 0.04 chs. This flag point is indicated on above diagram at "E," and is 0.95 chs. S. and 4.02 lks. W. from the true point for cor. of secs. 1, 2, 11 and 12. The length of random line bet. secs. 2 and 11 is therefore 72.00 chains + 3.58 chs. + 4.02 chs. = 80.20 chs. The falling of the random line extended is 0.99 chs. - 0.95 chs. = 0.04 chs. Included angles of triangle "ABC" are 20° 29', 89° 52' and 60° 39', the sum of which is 180° 00'.

Triangulated dist. "A-B" is obtained by

Bearing of "F-D" = S. 65° 39' E.
Included angles of triangle "DEF" are 24° 14', 94° 39' and 61° 07', the sum of which is 180° 00'.

Triangulated dist. "D-E" is obtained by
$$\frac{\sin 61^{\circ}07' \times \text{Base}}{\sin 24^{\circ}14'} \text{ or } \frac{.87561 \times 20.59}{.41042} = 43.92 \text{ chs.,}$$

which added to 3.46 chs. gives 47.38 chs. N. 89° 53' W. from point "B" for the position of point "E" on true line.

Triangulated dist. from "B" to "C" is obtained by $\frac{\text{sine } 62^{\circ} 50' \times \text{Base}}{\text{sine } 21^{\circ} 19'}$ or $\frac{.88968 \times 22.77}{.36352} = 55.72 \text{ chs.}$, the

latitude and departure of which is 55.43 chs. N., and 5.68 chs. W.

The latitude and departure of "A-B" = 3.98 chs. N. and 0.35 chs. E.

The latitude and departure of line "A-B-C" is therefore 59.41 chs. N. and 5.33 chs. W.

20.00 chs. + 59.41 chs. = 80.07 chs.

Set temp. $\frac{1}{4}$ sec. cor.

Foot of cliffs, bearing N. and S. facing W. Steep ascent of these cliffs renders chaining impracticable; therefore triangulate as described, as follows, and as shown on the diagram hereon:

From the cor. of secs. 21, 22, 27 and 28, measure a Base, N. 0° 2' W., 40.00 chs.

From N. end of Base, flag on W. C. to cor. of secs. 22, 23, 26 and 27, brs. S. 65° 10' E.

Included angles are 65° 08', 24° 46' and 90° 00', the sum of which is 180° 00'.

Triangulated distance from cor. of secs. 21, 22, 27 and 28, to the W.C. to cor. of secs. 22, 23, 26 and 27 is obtained by

$$\frac{\sin 65^{\circ}08' \times \text{Base} \text{ or } .90729 \times 40.00}{\sin 24^{\circ}46'} = \frac{36.2916}{.41892} = 86.63 \text{ chs.}$$

The W.C. being 6.50 chs. E. of cor. point, the distance to the cor. point is 86.63 chs. - 6.50 chs. = 80.13 chs.

Triangulated dist. on random sec. line is obtained by Tang. 71° 04' x Base or 2.91523 x 7.27 = 21.19 chs., which added to 15.52 chs. gives 36.71 chs. S. 89° 54' E. from sec. cor. for the position of the triangulation point

S. 89°52'E.; on a random line, bet. secs. 3 and 10.
 This line passes over cliffs, on the walls of National
 Canyon, and chaining is impracticable; therefore trian-
 gulate the measurement of the entire line and a meas-
 urement of the entire line and a measurement of the
 to the true course as described above:
 as follows, and
 as shown on
 the diagram
 hereon:

From the cor. of secs. 3, 4, 9
 and 10, indicated on
 diagram at "A," a flag
 "B" at cor. of secs. 10, 11,
 14 and 15 brs. S. 44°52'E., and
 a flag at "C" on sec. line,
 bet. secs. 10 and 11, 78.24 chs.
 N. 0°1'W. from "B", brs. S. 88°
 32'E.

Included angles of triangle "A-B-C" are 43°40', 44°51' and
 91°29' the sum of which is 180°00'.

Triangulated measurement of "A-C" is obtained by

$$\frac{\sin 44^\circ 51' \times \text{base}}{\sin 43^\circ 40'} \text{ or } \frac{.70525 \times 78.24}{.69046} = 79.92 \text{ chs.}$$

the latitude and departure of which is 2.04 chs., S. and
 79.89 chs. E.

Point "C" being 1.70 chs. S. of true point for cor. of secs.
 2, 3, 10 and 11, the falling of a random line due east
 bet. secs. 3 and 10 would fall 0.28 chs. (2.04 - 1.70)
 N. of the sec. cor. point.

The latitude of a random line S. 89°52'E., is 0.18 chs. S.;
 therefore, the falling of the random line will be 0.10
 chs. (0.28 - 0.18) N. of the sec. cor. point.

The true course and length of the sec. line, bet. secs. 3
 and 10 are therefore N. 89°48'W., 79.89 chs.

To locate the point for $\frac{1}{4}$ sec. cor., proceed as follows:
 From a point "D" in gulch, course E. near its junction
 with bottom of National Canyon, point "C" brs. S. 70°30'
 E.

From point "D," measure a base, N. 13°30'E., 7.97 chs. to
 point "E."

Bearing of "E-C" = S. 63°13'E.
 Vertical angle from "D" to "C." = + 18°50'.

Included angles of triangle "C-D-E" are 13°17', 90°00'
 and 76°43', the sum of which is 180°00'.

Triangulated measurement of "C-D" is obtained by

$$\text{Tang. } 70^\circ 43' \times \text{base or } 4.2358 \times 7.97 = 33.76 \text{ chs.}, \text{ the}$$

 latitude and departure of which are 7.83 chs. N. and
 32.83 chs. W.

The latitude of the section line N. 89°48'W., 32.83 chs.
 is 0.08 chs. N., which added to 1.70 chs. (point "C" to
 sec. cor. point) gives 1.84 chs. N. as the latitude of
 a line from point "C" to a point on sec. line S. from
 point "D."

7.88 chs. - 1.84 chs. = 6.04 chs., which is the distance
 from point "D" to 32.83 chs. station on sec. line.

From 30.95 ch. station indicated at "A," a flag "B" at 10 lks. N. of the cor. of secs. 20, 21, 28 and 29, brs. S. 89° 59' E.
 The random line extended will therefore fall 10 lks. N. of said sec. cor., giving a true return course for the sec. line N. 89° 55' W.
 A flag set at the ¼ sec. cor. of secs. 28 and 29, brs. S. 47° 20' E., and gives a Base "B-C" S. 0° 3' E. 40.10 chs.
 Included angles of triangle "A-B-C" are 42° 39', 90° 04' and 47° 17', the sum of which is 180° 00'.

Triangulated dist. on random line from "A" to "B" is obtained by

$$\frac{\text{side } 47^\circ 17' \times \text{Base}}{\text{side } 42^\circ 39'} \text{ or } \frac{.73472 \times 40.10}{.67752} = 43.49 \text{ chs.},$$

The continued satisfactory adjustment of the solar apparatus during the survey of this township in 1920 is indicated from field tests, as described in Book "H."

NOTE:

It was impracticable to complete the survey of the north tier of sections in this township, owing to the extremely rough and mountainous nature of the surface therein.

GENERAL DESCRIPTION.

The portion of this township surveyed as described in the foregoing field notes lies entirely within the Hualpai Indian Reservation in the NE.cor. thereof, near the south upper rim of the Colorado River Canyon. The surface of the central ranges of sections, and the northeast quarter of the township, is broken and mountainous, lying on the walls of National Canyon. The surface of the greater part of the west range of secs. is broken and mountainous, lying on the E. wall of Mohawk Canyon. Between the two canyons, the surface is rolling, and the southeast part of the township has a gently rolling surface, with a small strip of level land, near the S. bdy. of the Tp.

The National Canyon, course N. and NE. drains all of the township into the Colorado River, with the exception of the W. range of sections, where the drainage is into the Mohawk Canyon in T.32 N., R.7 W.

The soil in the canyons is mostly rocky, 4th rate, tho. there are benches in the canyon walls where a gravelly, 3rd rate soil is found. The remainder of the township has a gravelly loam, 2nd and 3rd rate.

Most of the township has a scattering growth of pine and cedar timber. There are scattered areas in the west half where the growth is dense. In National Canyon, in the northeastern part there is a large area devoid of timber.

There is a scattering undergrowth of sage brush, scrub cedar,
dogwood and cactus in nearly all parts.
Outside of the canyons, there is a fair growth of grass.
There is a spring in the NW. $\frac{1}{4}$ of sec. 15, with which excep-
tion there is no permanent flowing water in the Tp.
There are no settlers or improvements, and no indications
of valuable mineral.
There are no roads.
