FIELD NOTES

OF THE SURVEY OF THE

West boundary

and

Subdivision lines

of

TOWNSHIP 13 NORTH, RANGE 9 WEST.

Of the Gila and Salt River Base and Meridian,

In the State of Arizona.

EXECUTED BY

William H. Thorn, U.S. Cadastral Engineer,

and

Ty White, U.S. Transitman,

In the capacity of U. S. Surveyor~~S~~, under Special Instructions dated May 20, 1921,
issued by the United States Surveyor General to govern surveys included in Group
No. 115, which were approved by the Commissioner of the General Land
Office, November 8, 1921, and Assignment Instructions dated October 23, 1922.

Survey commenced March 10, 1923.

Survey completed March 27, 1923.

Indicates surveys executed by William H. Thorn, U.S. Surveyor,
on dates shown thereon.

Indicated surveys executed by Ty White, U.S.Transitman, on
dates shown thereon.

Surveys herein described, were executed on dates shown on diagram on page 1 hereof, by William H. Thorn, U.S.C.E., and Ty White, U.S.T., using respectively Young & Sons light mountain transits Nos. 8592 and 8540, both instruments are equipped with full vertical circle and Smith solar attachment; unless otherwise specified, all azimuth determinations are accomplished with the solar attachment.

Field Test of Instrument No. 8592 by William H. Thorn,
U. S. Cadastral Engineer.

March 9, 1923: I examine the adjustments of the transit and correct all errors; then, to test the solar apparatus, by comparing their indications, resulting from observations made during a.m. and p.m. hours with a meridian established by observations on Polaris, I proceed as follows:

At camp near the 1 sec. cor. of secs. 30 and 31, T. 13 N., R. 8 W., G. and S. R. B. and M., Arizona, lat. $34^{\circ}26'$ N., long. $113^{\circ}8\frac{1}{2}'$ W., at 8 hrs. 27 m., a.m., l.m.t., I observe Polaris at eastern elongation, making four observations, two each with the telescope in direct and reversed positions, and mark the mean point in the line thus determined on a peg driven firmly in the ground, 20 chs. South.

Azimuth of Polaris, at eastern elongation $1^{\circ}20'20''$.

At 8 hrs. 40 m., a.m., l.m.t., I lay off the azimuth of Polaris, $1^{\circ}20\frac{1}{2}'$ to the west, and mark the meridian thus determined by a peg driven firmly in the ground, 20 chs. South.

At 9 hrs. 0 m., a.m., l.m.t., I set off $34^{\circ}26'$ N. on the lat. arc; $4^{\circ}41\frac{1}{2}'$ S. on the decl. arc; and determine a meridian with the solar, which agrees with the true meridian.

At apparent noon, with the lat. arc unchanged, I observe the sun on the meridian; the resulting reading of the decl. arc is $4^{\circ}39'$ S., which agrees with the computed decl.

At 3 hrs. 0 m., p.m., l.m.t., with the lat. arc unchanged, I set off $4^{\circ}35\frac{1}{2}'$ S. on the decl. arc, and determine a meridian with the solar, which I find to agree with the true meridian.

As all of the solar observations during the usual hours of solar work come within $1^{\circ}30''$ of the true meridian, I conclude that the adjustments of the instrument are satisfactory.

Unless otherwise specified, all measurements are made with a Lufkin steel tape, 5 chs. in length, compared with a Lufkin 1 ch. standard steel tape and found correct. The measurements are made on the slope, the vertical angle determined and the slope measurements properly reduced to true horizontal distances.

Field Test of Instrument No. 8540 by Ty White,
U. S. Transitman.

March 8, 1923: I examine the adjustments of the transit and correct all errors; then, to test the solar apparatus, by comparing its indications, resulting from observations made during a.m. and p.m. hours with a meridian established by observations on Polaris, I proceed as follows:

At camp near the 1 sec. cor. of secs. 30 and 31, T. 13 N., R. 8 W., G. and S. R. B. and M., Arizona, lat. $34^{\circ}26'$ N., long. $113^{\circ}8\frac{1}{2}'$ W., at 8 hrs. 25.5 m., p.m., l.m.t., I observe Polaris at western elongation, making four observations, two each with the telescope in direct and reversed positions, and mark the mean point in the line thus determined on a peg driven firmly in the ground, 10 chs. N.

Azimuth of Polaris, at western elongation, $1^{\circ}20'20''$

BOOK 3614

3

March 9, 1923: At 8h.0m., a.m., l.m.t., I lay off the azimuth of Polar, $1^{\circ}20\frac{1}{2}'$ to the east, and mark the meridian thus determined by a tack in a peg driven firmly in the ground, 10 chs. North.

At 9h.0m., a.m., l.m.t., I set off $34^{\circ}26'N.$ on the lat.arc; $4^{\circ}41\frac{1}{2}'S.$ on the decl.arc; and determine a meridian with the solar, which agrees with the true meridian.

At apparent noon, with the lat.arc unchanged, I observe the sun on the meridian; the resulting reading of the decl.arc is $4^{\circ}39'S.$, which agrees with the computed declination.

At 3h.0m. p.m., l.m.t., with the lat. arc unchanged, I set off $4^{\circ}35\frac{1}{2}'S.$ on the decl.arc, and determine a meridian with the solar, which I find to agree with the true meridian.

As all of the solar observations during the usual hours of solar work come within $1'30''$ of the true meridian, I conclude that the adjustments of the instrument are satisfactory.

Unless otherwise specified, all measurements are made with a Lufkin steel tape, 5 chs., in length, compared with a Lufkin 1 ch. standard steel tape and found correct. The measurements are made on the slope, the vertical angle determined, and the slope measurements properly reduced to true horizontal distances.

4. Survey of West bdy. of Township 13 North, Range 9 West.

Chains.

The std. cor. of Ts. 13 N., Rs. 9 and 10 W. on the 3rd Std. Parallel N. established in 1911 by A.N.Oliver, U.S.T., is an iron post, 3 ins. in diam., projecting 12 ins. above ground, firmly set, properly marked on brass cap, and witnessed by a mound of stone N. of cor. No bearing trees.

Thence

North, on random line W. of T. 13 N., R. 9 W., setting temp. corms. at intervals of 40.00 chs.; and at 482.20 chs., fall 1.26 chs. E. of the cor. of Ts. 13 and 14 N., Rs. 9 and 10 W. established in 1919 by D. R. Averill, U.S.S., which is an iron post, 3 ins. in diam., projecting 12 ins. above ground, firmly set, properly marked on brass cap, and witnessed by a mound of stone S. of cor. No bearing trees. The falling answers to a correction of 0°9', or 21 lks.W. per mile, counting from the SW. cor. of the Tp. Return to the std.cor. of Ts. 13 N., Rs. 9 and 10 W.

The continued satisfactory adjustment of the solars during the survey of this township is indicated from field tests, as described in Book "L."

GENERAL DESCRIPTION.

The greater portion of the township is drained by Bridle Creek, this being the north and west portions, which creek enters the township near the $\frac{1}{4}$ cor.on the N.bdy. of sec.2, and flows SW., leaving the township near the std.cor.to secs. 32 and 33.

The extreme southeastern portion is drained by the North Fork of the Santa Maria river, which flows thru. a very deep canyon, entering the township on the E.bdy. of sec.25, and leaving it about $\frac{3}{4}$ of a mile west of the std.cor. of secs.35 and 36. The mountains in the southeast half of the township are very high, rough and rugged. Thorn's Peak, the highest peak in the township is in sec.27. This peak rises approximately 1575 ft. above Bridle Creek in sec.32. Bridle Creek forms the NW. boundary of the high, rugged mountains. Northwest of this creek, the land is hilly and broken, rising higher toward the NW. corner of the township. The higher mountains of the township are approximately 5500 ft. above sea level.

Most of the soil is rocky or gravelly, 3rd rate. Ut is good grazing land. The timber is scattering palo, verde, mesquite and juniper.

Patented mineral ground is found in secs.34,24, and 25. The mine in sec.24 was not operating during the time of survey.

There is running water the year round in the Santa Maria river, and also in Bridle Creek, at the 7U7 Ranch in the SW. $\frac{1}{4}$ of sec.10. There is also a small stream of running water in Placeritas Creek.

A ranch owned by Sterling Ellis is located on the north side of Bridle Creek, in the NW. $\frac{1}{4}$ of sec.16. The improvements consist of a frame house about 14x20, a pole corral, a pasture containing about 10 acres, fenced with barbed wire. The 7U7 sheep ranch is located on the north side of Bridle Creek, in the SW. $\frac{1}{4}$ of sec.10. The improvements consist of two buildings about 40x30 ft., one frame and one adobe, a well about 50 ft. deep, with windmill and 2500-gallon galvanized iron tank. About 15 acres are fenced with barbed wire.

The township as a whole is best adapted to stock raising.
