FIELD NOTES

OF THE SURVEY OF THE

Eighth Standard Parallel North, thru Range 13 West,

North and West boundaries, and

Subdivision lines of

TOWNSHIP 33 NORTH, RANGE 13 WEST,

Of the Gila and Salt River Base and Meridian,

In the State of Arizona.

EXECUTED BY

William H. Thorn, U. S. Surveyor,

and

Loyd E. Sechrist, U. S. Transitman,

In the capacity of U. S. Surveyors, under Special Instructions dated Oct. 12, 1916,
issued by the United States Surveyor General to govern surveys included in Group
No. 73, Arizona, which were approved by the Commissioner of the General Land
Office, October 24, 1916, and Assignment Instructions dated Apr. 19, 1917

Survey commenced July 23, 1917

Survey completed Nov. 14, 1917

2

Surveys herein described were executed by Wm. H. Thorn, U.S. Surveyor and Loyd E. Sechrist, U.S. Transitman, on dates shown on diagram on page 1 hereof, using respectively, Young and Sons light mountain transit No. 8592, and Buff solar transit No. 10125, each instrument being equipped with Smith solar attachment. The instruments are provided with two double verniers, placed opposite to each other, reading to single minutes of arc, which is also the least count of the verniers of the latitude and declination arcs.

These instruments were approved April 19, 1917, by the Assistant Supervisor of Surveys for Arizona and California, for field use under this Group, conditional upon satisfactory field tests.

We examine the adjustments of the transits, correcting all errors; then, to test the solar apparatus, by comparing their indications, resulting from solar observations made during a.m. and p.m. hours, with a meridian determined by observations on Polaris at elongation, we proceed with each instrument as follows:

July 21, 1917: At our camp, near center of sec. 24, T. 33 N., R. 13 W., in lat. $36^{\circ}14\frac{1}{2}'$ N.; long. $113^{\circ}39'$ W., at 11h. 37.2m. p.m., l.m.t., by our watches, which are set to correct local mean time, we observe Polaris at eastern elongation, making four observations, two each with the telescope in direct and reversed positions, and mark the mean point in the line thus determined by a tack in a stake, 5 chs. N.

Azimuth of Polaris at eastern elongation = $1^{\circ}24'43''$.

July 22, 1917: At 7h. 45m. a.m., l.m.t., lay off the azimuth of Polaris, $1^{\circ}24\frac{1}{2}'$ to the W., and mark a point in the line thus determined by a tack in a stake, 5 chs. N.

At 8h. 0m. a.m., l.m.t., set off $36^{\circ}14\frac{1}{2}'$ N. on the lat.arc; $29^{\circ}19\frac{1}{2}'$ N. on the decl.arc, and determine a meridian with the solar, which agrees with the true meridian.

At apparent noon, set off $20^{\circ}17\frac{1}{2}'$ N. on the decl.arc, and observe the sun on the meridian. The resulting reading of the lat.arc is $36^{\circ}14\frac{1}{2}'$ N.

At 4h. 0m. p.m., l.m.t., set off $36^{\circ}14\frac{1}{2}'$ N. on the lat.arc; $29^{\circ}15\frac{1}{2}'$ N. on the decl.arc, and determine a meridian with the solar, which agrees with the true meridian.

As all of the solar observations made during the usual hours of solar work come within $1'30''$ of the true meridian, conclude that the instruments are in satisfactory adjustment. Unless otherwise specified all measurements are made with Lufkin steel tapes, 5 chs. in length, compared with a Chesterman standard steel tape and found correct. The measurements are made on the slope, the vertical angles determined, and the slope measurements properly reduced to true horizontal distances.

Land, mountainous. Soil, rocky, 4th rate.

Locality 886

Survey of West bdy. of Township 33 North, Range 13 West. 9

- Chains. Timber, cedar and pinyon.
Undergrowth, sagebrush, cinchona, scrub oak, black brush, Spanish dagger and sarvis.
- 19.92 North, on true line, bet. secs. 13 and 18.
Over mountainous land, thru. scattering timber and undergrowth. Desc. 347 ft., over NE. slope.
Wash, 40 lks. wide, in gulch, course N. 80° E. Asc. 14 ft. over SE. slope, to
- 22.22 Impracticable to chain farther because of slide rock and cliffs. Set a flag ahead on line; vertical angle +26 $\frac{1}{2}$ °;
From 22.22 ch. point, measure a base East 10.00 chs.--impracticable to secure longer base-- from E. end of which, flag brs. N. 29° W. The dist. triangulated is given by $10.00 \times \cot. 29^\circ$ or $10.00 \times 1.80405 = 18.04$ chs., which added to 22.22 chs., gives 40.26 chs. N. from sec. cor. for position of triangulation point.
- 40.00 True point for $\frac{1}{4}$ sec. cor. is inaccessible.
40.26 Triangulation point. Narrow ledge on E. slope of pinnacle, with cliff 300 to 500 ft. high, on S., E. and N. sides. No suitable point on this ledge for establishment of witness cor. to $\frac{1}{4}$ sec. cor. is available. Impracticable to chain measurement N. of this point. Leave flag here and set another flag ahead on line--vertical angle- 10 $\frac{3}{4}$ °--from which measure a base East, 28.00 chs.--impracticable to secure longer base-- from E. end of which, flag brs. S. 35° 15' W. The dist. triangulated is given by $28.00 \times \cot. 35^\circ 15'$ or $28.00 \times 1.41497 = 39.62$ chs., which added to 40.26 chs. gives 79.88 chs. N. from cor. of secs. 13, 18, 19 & 24 as the position of the triangulation point.
- 56.50 From 79.88 ch. station, chain measurement, South 23.50 chs. to The nearest point on line at which it is practicable to establish witness cor. to the $\frac{1}{4}$ sec. cor. This point is about 500 ft. below the 40.26 ch. station on Tp. bdy. Set an iron post, 3 ft. long, 1 in. in dia., 26 ins. in ground for witness cor. to $\frac{1}{4}$ sec. cor., mkd. on brass cap,

41.95	Final Field Test of Buff Solar Transit No. 10125, by Loyd E. Sechrist, U. S. Transitman.
44.60	Nov. 14, 1917: Examine the adjustment of the transit, and correct all errors; then, to test the solar apparatus, by comparing its indications, resulting from solar observations made during a.m. and p.m. hours, with the true meridian determined July 21, 1917 by Polaris observations at camp near the center of sec. 24, T. 33 N., R. 13 W., lat. $36^{\circ}14\frac{1}{2}'$ N.; long. $113^{\circ}39'$ W., proceed as follows:
64.90	At 8h.0m. a.m., l.m.t., set off $36^{\circ}14\frac{1}{2}'$ N. on the lat. arc; $18^{\circ}9'$ S. on the decl. arc, and determine a meridian with the solar, which agrees with the true meridian.
79.91	At apparent noon, set off $18^{\circ}13'$ S. on the decl. arc, and ob- serve the sun on the meridian. The resulting reading of the lat. arc is $36^{\circ}14\frac{1}{2}'$ N.
	At 4h.0m. p.m., l.m.t., set off $36^{\circ}14\frac{1}{2}'$ N. on the lat. arc; $18^{\circ}14'$ S. on the decl. arc, and determine a meridian with the solar, which agrees with the true meridian. From the results of the above described field tests, con- clude that the solar apparatus has been in continued satisfactory adjustment throughout the surveys executed as described in the foregoing field notes.

Survey of Subdivision Lines of Township 33 North, Range 13 West. 53
Chains.

The continued satisfactory adjustment of the solar apparatus of Young & Sons light mountain transit No. 8592 used by William H. Thorn, U.S. Surveyor, in the execution of the surveys hereinbefore described is indicated from field tests described in Book "E."

GENERAL DESCRIPTION.

The surface of this township is mountainous and rolling. The greater part of the surface drains northeasterly into Pigeon Canyon, which traverses the NE. part of the township, course NW. The West two ranges of sections drain west and northwest, from a line of cliffs extending N. and S. thru. the township. The soil in some parts is a heavy loam, adobe and clay, 2nd and 3rd rate, while in others, the soil is rocky, 4th rate. There is a scattering growth of cedar and pinyon timber in all sections, and either a scattering or dense growth of sage brush, algerita, cinchona and scrub oak is found in all sections, and cactus in some parts. A fair growth of grass is prevalent over the greater part of the township.

There are no indications of valuable mineral deposits. There are no permanent streams of running water, the only permanent water in the township being at Upper Pigeon Spring in bottom of Pigeon Canyon in sec. 2.

There are no settlers, and the only improvement in the township consists of a tank for water storage at Upper Pigeon Spring. A road follows the bottom of Pigeon Canyon, which is joined in sec. 2 by another road, extending northerly and southerly, thru. the eastern part of the township. These two roads are the only ones in the township.

APPROVAL.

OFFICE OF THE UNITED STATES SURVEYOR GENERAL,

Phoenix, Arizona, Sept. 20, 1924.

The foregoing field notes of the survey of the 8th Standard Parallel North, through Range 13 West, and the North and west boundaries, and Subdivision lines of TOWNSHIP 33 NORTH, RANGE 13 WEST,

of the Gila and Salt River Base and Meridian, in the State of Arizona, executed by William H. Thorn, U. S. Surveyor, & Loyd M. Sechrist, U. S. Transitman, under his special instructions dated Oct. 12, 1916, for Group 73, Arizona, having been critically examined, and the necessary corrections and explanations made, the said field notes, and the surveys they describe, are hereby approved.

Charles W. Donohoe,
U. S. Surveyor General.

I certify that the foregoing transcript of the field notes of the above-described surveys in _____, has been correctly copied from the original notes on file in this office.
