of

TOWNSHIP 35 NORTH, RANGE 6 WEST

Of the Gila and Salt River Base and Meridian,

In the State of Arizona

EXECUTED BY

William E. Diester, U.S. Surveyor

and

Charles E. Hunter, U.S. Transitman

~~In the capacity of U.S. Surveyor~~, under Special Instructions dated April 23, 1923,

issued by the United States Surveyor General to govern surveys included in Group

No. 122, Arizona, which were approved by the Commissioner of the General Land

Office, May 17, 1923, and Assignment Instructions dated Nov. 15, 1923

Survey commenced December 14, 1923

Survey completed January 9, 1924

## BOOK 3681

Survey commenced Dec. 14, 1923, and executed by William E. Hiester, U.S. Surveyor and Charles E. Hunter, U.S. Transitman on dates shown on page 1 hereof, using Buff transit No. 9977 and Young and Sons transit No. 8292 respectively. Both instruments are equipped with full vertical circle and the Smith solar attachment, and were approved by the Assistant Supervisor of Surveys subject to satisfactory field tests. Unless otherwise specified all azimuth determinations are accomplished with the solar attachments.

Dec. 12, 1923: at camp near the cor. of secs. 3, 4, 9 and 10, T.35 N., R.7 W., Gila and Salt River Base and Meridian, Arizona, in latitude  $36^{\circ}27'$  N., longitude  $112^{\circ}56\frac{1}{2}'$  W. of Greenwich, we make an hour angle observation on Polaris east of the meridian, making four observations, two each with the telescope in direct and reversed positions, and mark the mean point in the line thus determined, on a peg driven firmly in the ground 5 chs. N.

L.M.T. of observation Dec. 12	---	5h 6m p.m.
Hour angle of Polaris east of the meridian	-----	3h 5.4m

Dec. 13, we lay off the azimuth of Polaris  $1^{\circ}0'$  to the west and mark the meridian thus determined by a tack in a stake driven firmly in the ground 8 chs. N.

Dec. 16, At the same station at 9h 0m a.m. app.t. we set off  $36^{\circ}27'$  N., on the latitude arcs,  $23^{\circ}15'S.$ , on the declination arcs and determine meridians with the solars which agree with the true meridian.

At app. noon with the latitude arcs unchanged we observe the sun on the meridian with each instrument, the resulting reading of the declination arcs is  $23^{\circ}16\frac{1}{2}'S.$  which agrees with the computed declination of the sun.

At 3h 0m p.m. app.t., with the latitude arcs unchanged, we set off  $23^{\circ}16'S.$  on the declination arcs and determine meridians with the solars which agree with the true meridian.

As all of the solar observations during the usual hours of solar work come within  $1^{\circ}30''$  of the true meridian, we conclude that the adjustments of the instruments are satisfactory.

Unless otherwise specified all measurements are made with Lufkin steel tapes 5 chs. in length compared with a Lufkin standard steel tape and found correct. The measurements are made on the slope, the vertical angle determined, and the slope measurement properly reduced to true horizontal distances.

The line bet. secs. 25 and 36 crosses a deep canyon, with precipitous sides where it is impracticable to chain. Therefore triangulate as follows:

Set Flag at Point "F" 15.73 chs. W. of the cor. of secs. 25, 30, 31 and 36, on E. bdy. of 4p. From Point "D" in triangulation on previous page, Flag at "F" bears East. From "D", measure a base N.46°28'E., 35.87 chs. to Point "E". Also line in flag at "G". From "E", Flag "F", bears S.69°34'E. and Flag "G", bears S.53°27'E.

By triangulation the distance from cor. of secs. 25, 26, 35 and 36 to Flag "G" = 31.30 chs.

- 31.30 Triangulation point.
- Thence by chaining.
- 37.00 Set temp. witness cor. to 1/4 sec. cor.

By the above triangulation the distance from the cor. of secs. 25, 26, 35 and 36 to Flag "F" = 64.29 chs. which added to 15.73 = 80.02 chs. and the true bearing is S.89°57'W.

From the cor. of secs. 25, 30, 31 and 36 on E. bdy. of Tp., hereinbefore described, S.89°57'W., on a true line bet. secs. 25 and 36. Over rolling land, through scattering timber and dense undergrowth.

 Over mountainous land, through scattering timber and

On account of precipitous cliffs on line ahead, over  
 which it is impractical to chain, I triangulate as  
 follows:

Set flags "A" and "B" on line ahead. From the triangu-

GENERAL DESCRIPTION

The surface of this township ranges from level to rolling, except in the southeast corner which is cut by deep canyons and would be classed as broken and mountainous. The soil is very rocky and ranges from 2nd. to 4th. rate. The southern and eastern portions of the township are covered with a heavy growth of cedar and piayon timber. In the northwest portion the timber becomes scattering. There are no streams springs or watering holes with in the township.

The continued satisfactory adjustment of the instruments throughout the survey of this township is indicated from field tests as given in Book "C".
