

# FIELD NOTES

OF THE SURVEY OF THE

10th. Standard Parallel North, through R.9 W.;

The West Boundary, the North Boundary and

the Subdivision Lines of

Township 41 North, Range 9 West

Of the Gila and Salt River Base and Meridian,

In the State of Arizona

### EXECUTED BY

William E. Hiester, U.S. Surveyor  
and

Willis J. Bandy, U.S. Surveyor

In the capacity of U. S. Surveyor<sup>s</sup>, under Special Instructions dated May 23, 1924, issued by the United States Surveyor General to govern surveys included in Group No. 131, Arizona, which were approved by the Commissioner of the General Land Office, June 6, 1924, and Assignment Instructions dated Dec. 6, 1924, and Jan. 14, 1925.

Survey commenced January 16, 1925.

Survey completed Feb. 5, 1925.

Surveyed under this group. Notes and dates in Book "A"

10th. Standard Parallel North.

Lines in black surveyed by William E. Hiester, U.S. Surveyor.

Lines in red surveyed by Willis W. Bandy, U.S. Surveyor.

Survey commenced Jan. 16, 1925, and executed by William E. Hiester, U.S. Surveyor and Willis W. Bandy, U.S. Surveyor, on dates shown on diagram on page 1, hereof, using respectively Buff light mountain transit No. 9977 and Young and Sons transit No. 8513. Both instruments are equipped with full vertical circles and Smith solar attachments, and were approved by the Assistant Supervisor of Surveys, conditional upon satisfactory field tests. Unless otherwise specified all azimuth determinations are accomplished with the solar attachments.

Test of Buff Transit No. 9977 by  
William E. Hiester, U.S. Surveyor.

I examine the adjustments of the transit and correct all errors; then to test the solar apparatus by comparing its indications resulting from solar observations made during a.m. and p.m. with a meridian determined from observation on Polaris, proceed as follows:

Jan. 16, 1925: At camp which is located in the SE.  $\frac{1}{4}$  of sec. 14, T. 41 N., R. 9 W., Gila and Salt River Base and Meridian, in latitude  $36^{\circ}56\frac{1}{2}'$  N., longitude  $113^{\circ}7\frac{1}{2}'$  W. of Greenwich, at 4h 00m p.m., app. t., I set off  $36^{\circ}56\frac{1}{2}'$  N. on the lat. arc,  $20^{\circ}49'$  S., on the declination arc and determine a meridian with the solar, which I mark by a tack in a stake driven firmly in the ground 5 chs. N.

At 11h 46m p.m., l.m.t., I observe Polaris at western elongation, making four observations, two each with telescope in direct and reversed positions and mark the mean point in the line thus determined on a peg driven firmly in the ground 5 chs. N.

Azimuth of Polaris at western elongation =  $1^{\circ}22'4''$

Jan. 17: At 7h 30m a.m., l.m.t., I lay off the azimuth of Polaris  $1^{\circ}22'$  to the east and find it agrees with the meridian previously determined with the solar.

At 8h 0m a.m., app. t., with the latitude arc unchanged, I set off  $20^{\circ}41\frac{1}{2}'$  S., on the declination arc and determine a meridian with the solar which agrees with the true meridian.

As all of the solar observations taken during the usual hours of solar work, come within 1' of the true meridian, I conclude that the adjustments of the instrument are satisfactory.

Test of Young and Sons Transit No.  
8513, by Willis W. Bandy, U.S. Surveyor.

Jan. 26, 1925: At 8h 0m a.m., app. t., with the instrument on the meridian described above, I set off  $36^{\circ}56\frac{1}{2}'$  N., on the latitude arc,  $18^{\circ}40'$  S. on the declinations arc and determine a meridian with the solar, which agrees with the true meridian.

At app. noon with the latitude arc unchanged, I observe the sun on the meridian, the resulting reading of the declination arc is  $18^{\circ}40'$  S. which agrees with the computed declination of the sun.

At 4h 0m p.m., app. t., with the latitude arc unchanged, I set off  $18^{\circ}35'$  S., on the declination arc and determine a meridian with the solar, which falls within 1' of the true meridian.

As all of the solar observations taken during the usual hours of solar work, fall within 1' of the true meridian I conclude that the adjustments of the instrument are satisfactory.

The instruments were tested at frequent intervals and maintained in satisfactory adjustment throughout the survey.

For test of solars on Feb. 9, at conclusion of the survey of this township, see Book "C".

Unless otherwise specified, all measurements are determined with Lufkin 5 ch. steel tapes, compared with a Lufkin standard steel tape and found correct. The measurements are made on the slope, the slope angles determined with clinometers and the slope measurements reduced to the true horizontal equivalent for entry in the field notes.

Chains	<p>From the standard cor. of Ts. 41 N., Rs. 8 and 9 W., which is an iron post, 3 ins. diam., 10 ins. above ground, properly marked on brass cap and witnessed by pits, West, on S. bdy. of sec. 36. Over rolling land, through dense undergrowth.</p>

 post, for 1/4 sec. cor. marked on brass cap

S 20  
 1/4 ----  
 S 29  
 1925

42.80 Wire fence, bears NE. and SW.  
 Asc. 70 ft. to  
 70.00 Desc. 40 ft. to  
 79.98 The cor. of secs. 19, 20, 29 and 30.

Land; rolling.  
 Soil; rocky, 3rd. rate.  
 Timber; none.  
 Undergrowth; sagebrush and cactus.

40.00 West, on a random line bet. secs. 19 and 30.  
 53.38 Set temp. 1/4 sec. cor.  
 Edge of precipitous cliffs down which it is impossible  
 to chain. Triangulate as follows: Flag "A" which is  
 15.76 chs. N. of the objective  
 cor. bears N.59°W. Flag "B"  
 bears N.42°27'W. From Flag "A"  
 "B" bears N.71°26'E., 9.60 chs.  
 dist. The solution of the  
 triangle thus formed gives a  
 length of 30.82 chs. for the  
 S. side of the triangle, the bearing  
 of which is N.59°W.  
 Lat. of same = 15.87 chs. Dep. = 26.42 chs.

53.38 + 26.42 = 79.80 chs.  
 The computed measurement and falling are therefore as  
 follows:

79.80 Fall 11 lks. S. of the <sup>point for</sup> cor. of secs. 19, 24, 25 and 30  
 on W. bdy. of Tp., hereinbefore described.

GENERAL DESCRIPTION

The surface of this township is rolling and broken, being cut up by numerous washes and small canyons. There is no timber in the township, the undergrowth consists of sagebrush, buckbrush, blackbrush, cactus, yucca and other varieties. There is one settler in the northwest corner of sec. 23 who has about forty acres in cultivation. The chief value of the township is for grazing. No evidence of mineral was found.

CERTIFICATE OF UNITED STATES SURVEYOR.

I, Willis W. Bandy, U. S. Surveyor, hereby certify upon honor that, in pursuance of special instructions received from the U. S. Surveyor General, for Group 131, Arizona bearing date of the 23rd day of May, 1924, I have well, faithfully, and truly in my own proper person, and in strict conformity with said instructions, the Manual of Surveying Instructions, and the laws of the United States, surveyed all those parts or portions of

The Subdivision Lines of

Township 41 N., Range 9 West of the Gila and Salt River Base and Meridian, in the State of Arizona, which are represented in the foregoing field notes <sup>and by diagram on page 1 hereof</sup> as having been executed by me, and under my direction; and that all the corners of said survey have been established and perpetuated in strict accordance with the Manual of Surveying Instructions, and the special written instructions of the U. S. Surveyor General, for Group 131, Arizona and in the specific manner described in the field notes, and that the foregoing are the original field notes of such survey.
