

FIELD NOTES

OF THE SURVEY OF THE

Tenth Standard Parallel North thru Range 6 East

the East, Boundary, West Boundary

and

Subdivision Lines of

Township 40 North, Range 6 East

of the Gila and Salt River Base and Meridian,

In the State of Arizona

EXECUTED BY

William E. Hiester, U.S. Surveyor

and

Otis O. Gould, U.S. Transitman

In the capacity of U. S. Surveyor 5, under Special Instructions dated April 23,

1926, issued by the ^{U.S.} District Cadastral Engineer to govern surveys included in Group

No. 139, Arizona, which were approved by the Commissioner of the General Land
Office, May 20, 1926, and Assignment Instructions dated Nov. 17, 1926
and Jan. 29, 1927.

Survey commenced January 15, 1927

Survey completed February 14, 1927

Surveyed Jan. 5 and 6, 1927 by W.E. Hiester, U.S.S. Group 126

_____ Surveyed by William E. Hiester, U.S. Surveyor on dates shown thereon.

_____ Surveyed by Otis O. Gould, U.S. Transitman, on dates shown thereon.

_____ Surveyed under this Group. Notes and dates in other books.

_____ Accepted surveys.

The surveys herein described were executed by William E. Hiester, U. S. Surveyor and Otis O. Gould, U. S. Transitman, on dates shown on diagram on page 1 hereof, using Buff light mountain transits Nos. 9208 and 9305. The instruments are equipped with U-shaped standards, $4\frac{1}{2}$ inch horizontal circle, 4 inch vertical circle and improved Smith solar attachments; all azimuth determinations are accomplished with the solar attachments except the special observations upon Polaris for meridian, upon which to test the solar apparatus as stated in the field notes.

January 13, 1927, in camp near the center of sec. 27, T. 40 N., R. 6 E., G. & S. R. B. and M., Arizona, in latitude $36^{\circ} 50' N.$, and longitude $111^{\circ} 45' W.$, at 0 h. 06 m., a.m., l.m.t., observe Polaris at western elongation, making four observations, two each with the telescope in direct and reversed positions, and marking a mean point on the line thus determined by a tack set in a peg driven in the ground about 10 chs. north.

Azimuth of Polaris at western elongation $1^{\circ} 21' 10''$.

At 8 h. 0 m., a.m., lay off the azimuth of Polaris $1^{\circ} 21'$ to the east and mark the meridian thus determined by a tack set in a stake driven in the ground about 10 chs. north.

To test the solar apparatus of transit No. 9208 used by William E. Hiester, U. S. Surveyor, by comparing its indications resulting from solar observations made during a.m. and p.m. hours, with meridian determined by observations on Polaris, as described above, proceed as follows:

January 13, 1927: At 8 h. 0 m., a.m., app. t., set off $36^{\circ} 50' N.$ on the latitude arc, $21^{\circ} 30' S.$ on the declination arc and determine a meridian with the solar which agrees with the true meridian.

At app. noon, with the latitude arc unchanged, observe the sun on the meridian; the resulting reading of the declination arc is $21^{\circ} 31' S.$, which agrees with the calculated declination of the sun.

At 4 h. 0 m., p.m., app. t., with the latitude arc unchanged set off $21^{\circ} 26\frac{1}{2}' S.$, on the declination arc and determine a meridian with the solar which agrees with the true meridian.

As all of the observations during the usual hours of solar work come within $1\frac{1}{2}'$ of the true meridian, conclude that the adjustments of the instrument are satisfactory.

To test the solar apparatus of transit No. 9305 used by Otis O. Gould, U. S. Transitman, by comparing its indications resulting from solar observations made during a. m. and p. m. hours, with meridian determined by observations on Polaris, Feb. 5, 1927 as described in Book "E" of this group, proceed as follows:

Feb. 6, 1927: At 8 h. 0 m., a.m., app. t., set off $36^{\circ} 53' N.$ on the latitude arc, $15^{\circ} 44\frac{1}{2}' S.$ on the declination arc and determine a meridian with the solar which agrees with the true meridian.

At app. noon, with the latitude arc unchanged observe the sun on the meridian; the resulting reading of the declination arc is $15^{\circ} 42' S.$, which agrees with the calculated declination of the sun.

At 4 h. 0 m., p. m., app. t., with the latitude arc unchanged set off $15^{\circ} 38\frac{1}{2}' S.$, on the declination arc and determine a meridian with the solar which agrees with the true meridian.

As all of the observations during the usual hours of solar work come within $1\frac{1}{2}'$ of the true meridian, conclude that the adjustments of the instrument are satisfactory.

Chains Jan. 16, 1927. At app. noon, at camp near center of sec. 27, T. 40 N., R. 6 E., G. & S. R. B. & M., Ariz., latitude $36^{\circ} 50'$ N., longitude $111^{\circ} 45'$ W., make a meridian observation of the sun for latitude, observing the altitude of the suns lower limb with the telescope in direct position, reversing the telescope and observing the suns upper limb.

Apparent time of observation, noon	12h	00m	00s
Mean observed altitude	32°	9m	21"
Reduced latitude	36°	50'	09.3"

Unless otherwise specified all measurements are made with Inallie steel tapes 5 chains in length, compared with a Lufkin Standard steel tape 1 chain in length and found correct.

The measurements are made on the slope, the vertical angle determined with a clinometer, and the slope measurements properly reduced to true horizontal distances.

Survey of the Tenth Standard Parallel North,
thru Range 6 East.

Chains From the standard cor. of T. 41 N., Rs. 5 and 6 E., de-
scribed in Book "B" of this group,

-GENERAL DESCRIPTION.

The land within this township is rolling with the exception of the extreme south eastern portion, which has an abrupt drop of about 2,000 ft. over the main rim of the Vermilion Cliffs.

The soil is composed of deep shifting sand of third and fourth rate.

The only timber consists of cedar and pinon, of very small dimensions, and a few scattering yellow pine in the southern portion. This timber being of a scrub variety is unfit for anything except firewood.

The only known water is located at Hamblin's Ranch, near the center of sec. 31, and the only road extends west from this Ranch to Kanab, Utah.

There is some grass on the township and sheep and cattle are being grazed extensively.

There is no evidence of mineral in this township.

FINAL TESTS.

Feb. 14, 1927: At camp in NE. ¼ of sect. 12, T. 40 N., R. 6 E., examine the adjustments of the instruments and find no errors. Then to test the adjustments of the solar attachments, proceed as follows:

At 8h. 00m., a.m., app. t., set off $13^{\circ}10'S.$ on the declination arcs and $36^{\circ}53'N.$ on the latitude arcs, and determine a meridian with the solars, which agrees with the true meridian.

At 4h. 00m., p.m., app. t., with the latitude arcs unchanged set off $13^{\circ}03'S.$ on the declination arcs., and determine a meridian with the solars, which agree within 1 minute of the true meridian.

As all of the observations taken within the usual hours of solar work, agree within 1' of the true meridian conclude that the adjustments of the instruments have been maintained during the survey of this township.

TRANSITMAN
CERTIFICATE OF UNITED STATES SURVEYOR.

I, *Otis O. Gould*, U.S. Transitman U. S. Surveyor, hereby certify upon honor that, in pursuance of special instructions received from the ^{U.S. District Cadastral Engineer} ~~U. S. Surveyor General~~ for *for Group 139, Arizona* bearing date of the *23rd* day of *April*, 1926, I have well, faithfully, and truly in my own proper person, and in strict conformity with said instructions, the Manual of Surveying Instructions, and the laws of the United States, surveyed all those parts or portions of

the Subdivision lines of

Township 40 North, Range 6 East of the *Gila and Salt River Base and Meridian*, in the State of *Arizona*, which are represented in the foregoing field notes ^{and by diagram on page 1 hereof} as having been executed by me, and under my direction; and that all the corners of said survey have been established and perpetuated in strict accordance with the Manual of Surveying Instructions, and the special written instructions of the ^{U.S. District Cadastral Engineer} ~~U. S. Surveyor General~~ for *for Group 139, Arizona*, and in the specific manner described in the field notes, and that the foregoing are the original field notes of such survey.

Place: *San Francisco, Calif.* *Otis O. Gould*
Date: *May 5, 1927.* *U.S. Transitman. U. S. Surveyor.*

~~APPROVAL:~~

~~OFFICE OF THE UNITED STATES SURVEYOR GENERAL,~~

~~19~~

~~The foregoing field notes of the survey of~~

~~executed by~~

~~under his special instructions dated~~, ~~19~~, ~~having been critically examined, and the necessary corrections and explanations made, the said field notes, and the surveys they describe, are hereby approved.~~

~~U. S. Surveyor General.~~

~~I certify that the foregoing transcript of the field notes of the above described surveys in~~

~~, has been correctly copied from the original notes on file in this office.~~

~~U. S. Surveyor General.~~

CERTIFICATE OF UNITED STATES SURVEYOR.

I, William E. Hiester, U. S. Surveyor, hereby certify upon honor that, in pursuance of special instructions received from the ^{U.S. District Cadastral Engineer,} ~~U. S. Surveyor General for~~ for Group 139, Arizona bearing date of the 23rd day of April, 1926, I have well, faithfully, and truly in my own proper person, and in strict conformity with said instructions, the Manual of Surveying Instructions, and the laws of the United States, surveyed all those parts or portions of the 10th Standard Parallel North in Range 6 East
