FIELD NOTES

of the

Survey of the

subdivisional lines of

Township 12 North, Range 12 East,

Of the Gila and Salt River Meridian,

In the State of Arizona

EXECUTED BY

Albinus N. Kimmell, U.S. Cadastral Engineer and

Charles E. Hunter, U.S. Transitman

Under special instructions dated March 20, 1934, which provided for the surveys included under Group No. 189, bearing the approval of the Commissioner of the General Land Office under date of April 16, 1934 and assignment instructions dated June 29, 1935.

Survey commenced August 6, 1935.

Survey completed September 16, 1935.

The subdivisional survey of township 12 north, range 12 east, was executed with a Buff solar transit No. 18002 and a Gurley solar transit No. 20120, property of the General Land Office. The horizontal circle of the Buff instrument, has a diameter of $4\frac{1}{2}$ ins., with two double opposite verniers reading to single minutes; the vertical circle has a diameter of 4 ins., with one double vernier reading to single minutes. The telescope has fixed stadia wires, ratio 1:132, with a focal constant of 1.2 lks. The instrument is equipped with the improved Smith solar attachment; radius of latitude arc $2\frac{1}{2}$ ins., and of declination arc $3\frac{1}{2}$ ins., each with verniers reading to single minutes. The horizontal circle of the Gurley instrument has a diameter of $5\frac{3}{4}$ ins., with two double opposite verniers reading to 30 seconds of arc; the vertical circle has a diameter of $4\frac{1}{2}$ ins., with one double vernier reading to single minutes. The telescope has fixed stadia wires, ratio 1:132, and also a focal constant of 1.2 lks. The instrument is equipped with the improved Smith solar attachment; radius of latitude arc $2\frac{1}{2}$ ins., and declination arc 3.1 ins., each with verniers reading to single minutes.

The instruments were in good condition, and having been placed in satisfactory adjustment prior to beginning the survey, and tested and found free from appreciable error, were approved by the district cadastral engineer, on June 29, 1935.

All of the instrumental adjustments are examined before making the field tests hereinafter recorded. The direction of all lines were determined by solar transit method. The measurements were made with Lallie steel tapes, 5 chs. in length, graduated every link for the first 100 lks., and the balance at intervals of 10 lks.

The tapes were tested by comparison with a Lufkin standard steel tape and found correct. The measurements were made on the slope; the vertical angle of each interval ascertained by a clinometer in good adjustment; and the horizontal equivalents are entered in the field note record.

The data furnished with the special instructions gives the geographic position of the southeast corner of T. 11 N., R. 13 E., as follows: latitude $34^{\circ} 17' 01''$ N.; longitude $110^{\circ} 55' 39''$ W.

August 3, 1935: At station in the northwest quarter of section 21, township 11 north, range 12 east, at 6h. 42m p.m., by my watch, which reads correct 105th meridian time, having been recently compared with a Western Union clock, I make an hour angle observation on Polaris east of the meridian, for azimuth and latitude, making two sights each with the telescope in the direct and the reverse positions, reading the deflection angles from a reference mark, which is a tree on sky-line to the southwest of observing station. The horizontal angles are right deflections to Polaris.

Mean watch time of observation	6h 42m 00s
Mean horizontal angle to mark	$158^{\circ} 03' 34''$
Azimuth of Polaris	$0^{\circ} 27' 06''$
Watch fast of local mean time	24m 23s
Mean vertical angle to Polaris	$33^{\circ} 22' 07''$
Reduced latitude	$34^{\circ} 19' 28''$

August 4: At 9h 00m a.m., app.t., with $34^{\circ} 19\frac{1}{2}'$ N., set off on the latitude arcs; $17^{\circ} 24\frac{1}{2}'$ N., set off on the declination arcs; the instruments are oriented by means of their solar attachments. The solar bearing of each in-

Subdivision of T. 12 N., R. 12 E.

Chains

Instrument to reference mark, is within $1\frac{1}{2}'$ of the true bearing, as determined by observation on Polaris.

At apparent noon, with the latitude arcs unchanged, the sun is observed on the meridian. The resulting reading of each declination arc is $17^\circ 22'$ N., which agrees with the computed declination of the sun.

At 3h 00' p.m., app.t., with the latitude arcs unchanged, and $17^\circ 20\frac{1}{2}'$ N., set off on the declination arcs, the instruments are oriented by means of their solar attachments. The solar bearing of each instrument to reference mark, is again within $1\frac{1}{2}'$ of the true bearing determined by the Polaris observation.

As all of the solar observations taken during the usual hours of solar work, very less than $1\frac{1}{2}'$ from the true meridian, it is concluded that the instruments are in satisfactory adjustment.

From the cor. of secs. 1, 2, 35 and 36, on the south bdy. of the township, described in the field notes of the north bdy. of T. 11 N., R. 12 E., surveyed under this group.

N. $0^\circ 01'$ W., bet. secs. 35 and 36.

Ascend slightly over S. slope, through heavy timber and scattering undergrowth.

2.50 Top of ascent; desc. slightly over NE. slope.

6.20 Draw, course SE.; asc. 35 ft. over SE. slope.

13.30 Rim road, bears NE. and SW.

14.70 Forest Service telephone line, bears NE. and SW.

18.30 Crest of divide, bears E. and W.; desc. 11 ft. over N. slope.

24.80 Thence over NE. slope, desc. 50 ft.

34.80 Small draw, course E.; asc. slightly.

38.80 Top of small rise, bears E. and W.

40.00 Set an iron post, 3 ft. long, 1 in. diam., 24 ins. in the ground, in a small mound of stone, for $\frac{1}{4}$ sec. cor., with brass cap mkd.

September 8, 1935: The Buff solar transit No. 18002 is tested at station near the center of sec. 12, T. 12 N., R. 11 E., where a true meridian was previously determined on August 10, as described in the field notes of the south bdy. of T. 13 N., R. 12 E., resurveyed under this group.

At 9h 00m a.m., app.t., with the latitude arc set at $34^{\circ} 27'$ N., and the declination arc set at $5^{\circ} 54'$ N., the instrument is oriented with the solar; the solar meridian thus obtained, agrees within 1' of the true meridian.

At apparent noon, with the latitude arc unchanged, the sun is observed on the meridian; the resulting reading of the declination arc is $5^{\circ} 52'$ N., which agrees with the computed declination of the sun.

At 3h 00m p.m., app.t., with the latitude arc unchanged, and the declination arc set at $5^{\circ} 48'$ N., the instrument is oriented with the solar, and again agrees within 1' of the true meridian.

September 16, 1935: The Gurley solar transit No. 20120

Subdivision of T. 12 N., R. 12 E.

is tested on the meridian at station near the center of sec. 12, T. 12 N., R. 11 E., described in the foregoing field notes.

At 9h 00' a.m., app.t., with the latitude arc set at $34^{\circ} 27'$ N., and the declination arc set at $2^{\circ} 51'$ N., the instrument is oriented with the solar; the solar meridian thus obtained agrees within 1' of the true meridian.

At apparent noon, with the latitude arc unchanged, the sun is observed on the meridian; the resulting reading of the declination arc, is $2^{\circ} 48'$ N., which agrees with the computed declination of the sun.

At 3h 00' p.m., app.t., with the latitude arc unchanged, and the declination arc set at $2^{\circ} 46'$ N., the instrument is oriented with the solar; the solar meridian thus obtained again agrees within 1' of the true meridian.

General description

The greater portion of township 12 north, range 12 east, is situated on the Mogollon Plateau, about 35 miles southwest of Winslow, Arizona. The average elevation is about 7500 feet above sea level. The township is well supplied with roads. A well graded road leading from Winslow to Payson, enters the township on the east boundary of sec. 36, follows close to the divide and passes out of the township on the west boundary of sec. 30. Connected with this road are various side roads and truck trails leading to almost every part of the township.

The land surface is rolling. Practically all of the drainage is away from the Mogollon Rim, in a northeast direction. The township is generally covered with a good growth of timber. Yellow pine and Douglas fir predominate. White pine, spruce, aspen, locust, and black and white oak are found in more scattered growths. The undergrowth which is scattering consists of oak, manzanita, dogwood, vine maple, locust and second growth pine and fir. A good stand of native grass is found over most of the township. This section of the country is well supplied with wild game. Deer, elk and wild turkeys are quite abundant, while bear and mountain lions are frequently encountered.

CERTIFICATE OF UNITED STATES SURVEYER

We, Albinus N. Kimmell, U.S. Cadastral Engineer and
Charles E. Hunter, U.S. Transitman, HEREBY CERTIFY upon honor that, in
pursuance of special instructions bearing date of the 20th day of March, 1934,
received from the district cadastral engineer for Arizona, with assignment
instructions dated June 29, 1935, we have surveyed the subdivisional lines of
Township 12 North, Range 12 East.

River
of the Gila and Salt Meridian, in the State of Arizona, which are
represented in the foregoing field notes as having been executed by ^{us} and under ^{our} direction; and that said
survey has been made in strict conformity with said instructions, the Manual of Instructions for the Survey
of the Public Lands of the United States, and in the specific manner described in the foregoing field notes.
Glendale, California, February 1, 1936. *Albinus N. Kimmell*
Glendale, California, February 1, 1936. *Charles E. Hunter*
U. S. Cadastral Engineer.
U. S. Transitman.

CERTIFICATE OF APPROVAL

OFFICE OF U.S. SUPERVISOR OF SURVEYS,

Denver, Colorado, June 15, 1936.

The foregoing field notes of the survey of the subdivisional lines of Township
12 North, Range 12 East, of the Gila and Salt River meridian, in the
State of Arizona,

executed by Albinus N. Kimmell, U.S. Cadastral Engineer and
Charles E. Hunter, U.S. Transitman,
under special instructions dated March 20, 1934, and assignment
instructions dated June 29, 1935, having been critically examined, and
the necessary corrections made prior to their certification by the engineer, the said field notes, and the survey
therein described, are hereby approved.

U.S. Supervisor of Surveys.

CERTIFICATE OF TRANSCRIPT

I certify that the foregoing transcript of the field notes of the above described surveys in
is a true copy of the original field notes on file in the public survey office.

U.S. Supervisor of Surveys.
