# FIELD NOTES OF RESURVEY OF

East, West, South and North Boundaries

and Part of the Subdivision Lines of

Township 6 North, Range 9 East

## AND OF THE SURVEY OF

Boundaries of Tracts Nos. 37, 38, 39, 40 and 41

Tie to U.S. Mineral Monument No. 1, Brown Lining District,

and Part (Completion) of the Subdivision Lines of

Township 6 North, Range 9 East

Of the Gila and Salt River Base and Meridian,

In the State of Arizona

### EXECUTED BY

Benjamin J. Kinsey, U.S. Surveyor

Bert E. Wakeman, Public Land Surveyor

and Daniel M. Wier, Public Land Surveyor

Under special instructions dated April 19, 1934, and supplemental special instructions dated August 22, 1935

for the surveys included under Group No. 204, Arizona, bearing the approval of the

Commissioner of the General Land Office under dates of May 7, 1934 and August 30, 1935.

and assignment instructions dated May 15, 1935

Resurvey and Survey commenced May 29, 1935

Resurvey and Survey completed February 21, 1936

- Accepted surveys.
- Unsurveyed.
- Surveyed under this group  
Field notes herein.
- Resurveyed under this group.  
Field notes herein.
- To be surveyed under this group.
- To be resurveyed under this group.
- Retraced under this group, to  
locate control corners.
- Accepted, surveyed areas as per  
accepted plats on file.

The resurveys and surveys herein described were executed by Benjamin J. Kinsey, U.S. Surveyor, Daniel M. Wier, Public Land Surveyor, and Bert E. Wakeman, Public Land Surveyor, using respectively Buff transit No. 18,000, Young and Sons transits No. 8592 and 8540. The instruments are equipped with the Smith solar attachments and otherwise conform to the standard requirements of the General Land Office.

Test of Buff transit No. 18,000 and  
Young & Sons transit No. 8540

by

Benjamin J. Kinsey, U.S. Surveyor.

May, 29, 1935; at my station in sec. 21, about 5 chs. S.E. of the cor. of secs. 16, 17, 20, and 21, T. 6 N., R. 9 E., G. & S.R.B. & M., Arizona, in latitude  $33^{\circ} 51' 14''$  N., determined from data provided with Group Instructions and subsequently checked by observations upon the sun as hereinafter described, and longitude  $111^{\circ} 26' 30''$  W., examine the adjustments of the instruments and find no errors. Then to test the workings of the solar attachments, proceed as follows:

At 3h.18m., a.m., l.m.t., I observe Polaris at eastern elongation, making four observations, two each with telescope in direct and reversed positions, and marking the mean point thus determined by a tack set in top of a wooden stake, driven firmly in the ground about 5 chs. northerly.

Azimuth of Polaris at eastern elongation :  $1^{\circ} 15' 30''$ .

May, 30; at daylight lay off azimuth of Polaris,  $1^{\circ} 15' 30''$  to the west and mark the true meridian thus determined by a tack set in top of a stake, driven firmly in the ground about 5 chs. North.

At 9h.00m., a.m., app. t., set off  $33^{\circ} 51'$  N., on the lat. arc;  $21^{\circ} 42\frac{1}{2}'$  N., on the decl. arc, and determine a meridian with the solar which I find to agree with the true meridian.

At 12h.00m., app. noon, with the latitude arc unchanged, observe the sun on the meridian; the resultant reading of the declination arc is  $21^{\circ} 44'$  N., which agrees with the computed declination of the sun.

At 3h.00m., p.m., app. t., with latitude arc unchanged, set off  $21^{\circ} 45'$  on the declination arc and determine a meridian with the solar which agrees with the true meridian.

As all of the observations, taken during the usual hours of solar work, agree within  $1''$  of the true meridian, conclude that the instrument is in a satisfactory state of adjustment.

Unless otherwise specified all measurements are made on the slope, the vertical angle determined with a clinometer, and the slope measurements properly reduced to horizontal equivalents.

All measurements are made with a Lallie steel tape, 5-chs. in length, compared with a Iufkin standard and found correct.

BOOK 4100

2

Observation for Time and Latitude  
by

Benjamin J. Kinsey, U.S. Surveyor,  
using  
Buff transit No. 18,000.

May, 31, 1935; at same station described on page 1 hereof, in approximate latitude  $34^{\circ} 51' N.$ , and longitude  $111^{\circ} 26' 30'' W.$ , I make a meridian observation of the sun for time and latitude, observing simultaneously the altitude of the suns lower limb and the transit of the suns west limb, reversing the telescope and observing simultaneously the altitude of the suns upper limb and the transit of the suns east limb:

	Suns position.
Telescope normal :	
Telescope reversed:	
Mean observed altitude:	$78^{\circ} 01' 08''.$
Reduced latitude :	$33^{\circ} 51' 14''.$
Mean watch time of obsn.:	$12h.19m.23s.$
Watch fast of l.m.t. :	$16m.47s.$

Oct. 13, 1935; at same station as above described, using Buff transit No. 18,000 make observation for time and latitude as follows:

Telescope normal :	
Telescope reversed :	
Mean observed altitude:	$48^{\circ} 48' 00''.$
Reduced latitude :	$33^{\circ} 51' 14''.$
Mean watch time of obsn.:	$12h.14m.50s.$
Watch fast of l.m.t. :	$28m.22s.$

Preliminary test of Young & Sons  
transit No. 8592

by  
Daniel M. Wier, Public Land Surveyor.

Sept. 15, 1935; at my station about 25 chs. S.  $75^{\circ} E.$  of the cor. of secs. 24 and 25, T. 6 N., R. 9 E., G. & S. R. B. and M., Arizona, in latitude  $33^{\circ} 49' 30'' N.$ , and longitude  $111^{\circ} 22' 00'' W.$ , examine the adjustments of the transit and find no errors; then to test the workings of the solar attachment proceed as follows:

At 8h. 08m., p.m., l.m.t., observe Polaris at eastern elongation, making four observations, two each with telescope in direct and reversed positions, and marking the mean point in the line thus determined by a tack set in top of a peg, driven firmly in the ground about 5 chs. Northerly.

Azimuth of Polaris at eastern elongation:  $1^{\circ} 15' 30''.$

At 9h. 00m., a.m., app.t., set off  $33^{\circ} 51' N.$ , on the lat. arc;  $7^{\circ} 35' N.$ , on the decl. arc, and determine a solar meridian which agrees with the true meridian.

At 12h. 00m., app. noon, with lat. arc unchanged, observe the sun on the meridian; the resultant reading of the decl. arc is  $7^{\circ} 38' N.$ , which agrees with the computed declination of the sun.

At 3h. 0m., p.m., app.t., with lat. arc unchanged, set off  $9^{\circ} 51'$  S., on the decl. arc, and determine a meridian with the solar which agrees with the true meridian.

As all of the observations, taken within the usual hours of solar work, agree within 1' of the true meridian, conclude that the instrument is in a satisfactory state of adjustment.

All measurements are made with a Lallie steel tape, 5 chs. in length, compared with a Lufkin standard and found correct.

The measurements are made on the slope, the vertical angle determined, and slope measurements properly reduced to true horizontal measurements.

## Resurvey of the East Bdy. of T. 6 N., R. 9 E.

## Chains

In 1878, W. A. Hancock, U.S.D.S., surveyed the E. bdy. of T. 6 N., R. 9 E., establishing corners thereon with common reference to areas on both sides of the line. No retracement or resurvey is of record. The following notes describe a dependent resurvey of the north one mile of the E. bdy. of T. 6 N., R. 9 E., reconstructing the original cor. of secs. 1, 6, 7, and 12, reestablishing the  $\frac{1}{4}$  sec. cor., and the Tp. cor., with their original reference, and an independent resurvey of the south five miles of said Tp. bdy. The Tp. cor. is reestablished at record latitude north from original cor. of secs. 1, 6, 7, and 12, and record departure from the original cor. of secs. 4, 5, 32, and 33, Ts. 6 and 7 N., R. 10 E. No control exists to the North, and the Tp. cor.  $5\frac{1}{2}$  miles west, the nearest original corner found in that direction, was not used as a control corner owing to extreme distortion of the Tp. bdy., which would result from such control.

Retracement for Resurvey.

From the original cor. of secs. 1, 6, 7, and 12, hereinafter described.

North, on a random line, bet. secs. 1 and 6.

40.00 No  $\frac{1}{4}$  sec. cor. found after diligent search. Set temp.cor.

80.00 (Record dist.) No township corner found after diligent search. Set temp. Tp. cor. "A."

The original corner of secs. 4, 5, 32, and 33, Ts. 6 and 7 N., R. 10 E., is a granite stone 18x10x8 ins. firmly set in ground and mound of stone and plainly marked with two grooves on W. face and 4 grooves on E. face. The original bearing trees cannot be found.

Thence,

West, on a random line, searching diligently at record intervals for the original corner monuments. Fail to find any trace of original corners, therefore at

159.01 (Record distance), Set temp. Tp. cor. "B," from which temp. Tp. cor. "A" bears W. 23 lks. dist. The point for reestablishment of the Tp. cor. is therefore identical with temp. Tp. cor. "B." True course and distance of E. bdy. of sec. 1 are therefore N.  $0^{\circ} 10'$  E., 80.00 chs.

Dependent Resurvey.

The original cor. of secs. 1, 6, 7, and 12, T. 6 N., Rs. 9 and 10 E., is a granite stone 8x12x20 ins. above ground, firmly set, marked with one groove on N. face and 5 grooves on S. face. The original bearing trees cannot be found.

Reconstruct this cor. monument by setting an iron post, 3 ft. long, 2 ins. in diam., 18 ins. in the ground to bedrock, alongside original cor. stone, and in a mound of stone to top, for the cor. of secs. 1, 6, 7, and 12, with brass cap marked

## RESURVEY OF THE SOUTH BDY. OF T. 6 N., R. 9 E.

The South Bdy. of T. 6 N., R. 9 E., was surveyed in 1878 by W. A. Hancock, U.S.D.S., who established corners thereon with common reference to areas on both sides of the line. No retracement or resurvey of any part of the line is of record. The following notes describe an independent resurvey of the entire line, reestablishing corners thereon with reference to areas north of the line only. Except as noted, no trace of original sec. and  $\frac{1}{4}$  sec. cors. were found on or near the resurveyed line.

From cor. of T. 6 N., R. 9 E. only, (S.E.cor.), hereinbefore described,

West, on true line, on S. bdy. of sec. 36,

Over mountainous land, through scattering timber and dense undergrowth.

Asc. 18 ft. over SE. slope.

7.20 Small spur, slopes S.; desc. 26 ft. over SW. slope.

9.50 Wash, 10 lks. wide, course SE.; asc. 26 ft. over NE. slope.

## Resurvey of the West Bdy. of T. 6 N., R. 9 E.

The west bdy. of T. 6 N., R. 9 E., was surveyed in 1878 by W. A. Hancock, U.S.D.S., who established corners thereon with common reference to areas on both sides of the line. No retracement or resurvey of any part of this line is of record. The following notes describe an independent resurvey of the line due North, in a position about  $\frac{1}{2}$  mile West from its original location, reestablishing common reference cors. at 40 ch. intervals. All original cors., including the two terminal township cors., were found and ties obtained to the corresponding reestablished cors., after which the original cors. were destroyed, except those reconstructed as angle points of Tract boundaries.

From the cor. of Ts. 5 and 6 N., Rs. 8 and 9 E., hereinbefore described,

North, on true line, bet. secs. 31 and 36.

Over mountainous land, through scattering timber and dense undergrowth.

Asc. 36 ft. over SE slope.

6.00 Spur, slopes SE.; desc. 117 ft. over NE. slope.

23.00 Wash, 100 lks. wide, course SW.; asc. 210 ft. over SW. slope.

40.00 Set an iron post, 3 ft. long, 1 in. in diam., 14 ins. in the ground to bedrock, with a stone 6x6x3 ins. marked with a cross (X) deposited at base, and in a mound of stone to top, for  $\frac{1}{4}$  sec. cor., with brass cap marked

## TRACT NO. 37.

Comprising the following described land in original Section 5, T. 6 N., R. 9 E., as shown on plat of said township approved February 17, 1879, patented April 1, 1907, to Wm. W. Moore, under H.E.1865, Prescott;

SW $\frac{1}{4}$  NE $\frac{1}{4}$ , N $\frac{1}{2}$  SE $\frac{1}{4}$ , and SE $\frac{1}{4}$  SE $\frac{1}{4}$ .

The location of this tract is based upon the subdivision of the section, controlled by the original SE. and SW. sec. cors., and the original E.  $\frac{1}{4}$  sec. cor. of said section and the original cor. of Ts. 6 & 7 N., Rs. 8 & 9 E. No original sec. or  $\frac{1}{4}$  sec. cors. having been found on the N. bdy. of this Tp., temp. NW. & NE. cors. and N.  $\frac{1}{4}$  sec. cor. of sec. 5, are set on the resurveyed Tp. bdy. at record distances E. from said Tp. cor. for control of the W. bdy., N.  $\frac{1}{2}$  of E. bdy. and meridional  $\frac{1}{4}$  sec. line, of original sec. 5. The original W. and S.  $\frac{1}{4}$  sec. cors. of sec. 5 could not be found.

-----  
At point in center of NE $\frac{1}{4}$  of original sec. 5, determined by record proportions, monument angle point No.1 of Tract No. 37 as follows:

Set an iron post, 3 ft. long, 1 in. diam., 12 ins. in ground to bedrock and in mound of stone to top, for angle point No.1 of Tract No. 37, with brass cap marked

19.56

Intersect angle point No. 1 of Tract No. 41, the place of beginning, hereinbefore described.

Resurvey and Completion Survey of  
Subdivision of T. 6 N., R. 9 E.

45

## Chains

The subdivision lines of T. 6 N., R. 9 E., with the exception of lines bet. secs. 13 & 24, 19 & 20, 28 & 29, 28 & 33, E.  $\frac{1}{2}$  bet. secs. 12 & 13, E.  $\frac{1}{2}$  bet. secs. 20 & 29, E.  $\frac{1}{2}$  bet. secs. 29 & 32, W.  $\frac{1}{2}$  bet. secs. 30 & 31, and N.  $\frac{1}{2}$  bet. secs. 32 & 33, were surveyed in 1879 by W. H. Hancock, U.S.D.S.

No retracement or resurvey of any of the subdivision lines of this Tp., or survey of the above mentioned exceptions, is of record.

The following notes describe an independent resurvey of all of the subdivision lines of the 1879 survey, and a survey of the remaining lines, thus completing the subdivision of the township.

Each original section and  $\frac{1}{4}$  section corner found within the township is described in connection with description of the corresponding reestablished corner, together with the bearing and distance of a direct tie between the related corners, and in the following notes the omission of such data from a reestablished corner description indicates that no trace of the corresponding original cor. was found.

All original corners are destroyed, after obtaining the ties to the reestablished cors., except those which form angle points of the five Tracts surveyed within the township, in which cases they are replaced by brass-capped iron posts, properly marked and numbered for such Tract angle point reference.

## Note:

Instrumental work in connection with the resurveys and surveys described in the foregoing field notes was completed December 7, 1935, but the permanent corner monuments of Tract No. 37 were set February 20 and 21, 1936.

## Final Field Test of Buff

Transit No. 18,000

by

Benjamin J. Kinsey, U.S. Surveyor.

December, 8, 1935: at same station as described on page 2, hereof, I examine the adjustments of the transit and find no errors; then to test the working of the solar attachment proceed as follows:

At 9h.00m., a.m.; app.t., with latitude arc set  $33^{\circ}49\frac{1}{2}'$  N., and declination arc set at  $22^{\circ}38'S.$ , determine a meridian with the solar which agrees with the true meridian.

At 12h.00m., app. noon, with latitude arc unchanged, observe the sun on the meridian; the resultant reading of the declination arc is  $22^{\circ}40' N.$ , which agrees with the computed declination of the sun.

At 3h.00m., p.m., app.t., with lat. arc unchanged set off  $22^{\circ}40'S.$  and determine a meridian with the solar which agrees with the true meridian.

As all of the observations taken agree within 1' of the true meridian conclude that the adjustments of the instrument have been maintained during the surveys described herein.

## Final Field Tests of Young &amp; Sons

Transits Nos. 8540 &amp; 8592,

by

Bert E. Wakeman, Public Land Surveyor.

December, 7, 1935: at same station as described on page 2 hereof, examine the adjustments of the transits and find no errors. Then to test the workings of the solar apparatus proceed as follows:

A 9h.00m., a.m.; app.t., with lat. arc set at  $33^{\circ}49\frac{1}{2}'$  N. and declination arcs set at  $22^{\circ}29'S.$ , determine a meridian with the solar which agree with the true meridian.

At 12h.00m., app.t., noon with lat arc unchanged, observe the sun on the meridian; the resultant reading of the decl. arcs are  $22^{\circ}31'S.$ , which agrees with the computed declination of the sun.

At 3h.00m., p.m., app.t., with lat. arc unchanged, set off  $22^{\circ}31'S.$  on the decl. arcs and determine meridians with the solar which agrees with the true meridian.

As all of the observations taken during the usual hours of solar work agree within 1' of the true meridian, conclude that the adjustments of the instruments have been maintained during the surveys herein described.

## GENERAL DESCRIPTION.

Land: lies in the Mazatzal Range of mountains with elevation above sea level, ranging from 6,000 ft. in the northeastern quarter to 3,000 ft. in the southwestern quarter. The divide between Tonto and Sycamore Creeks lies N. and S. through the E. part.

Drainage: easternmost sections drain toward Tonto Creek, and the greater western area drains southerly by way of Sycamore Creek.

**Soil:** chiefly rocky and gravelly 4th. rate on slopes and in washes. Certain lands along Sycamore and Ram Valley Creeks which are being farmed are of a sandy, black loam capable of producing fairly good hay crops and good fruit. The formations are granite and malapai.

**Timber:** the predominating species are the juniper, oak, sycamore, paloverde, willow, and along the higher slopes are a few pinion and yellow pine, with merchantable value as posts and fuel.

**Mineral:** while there are no producing mines at present in the township, some development work is going on principally in sec. 9; the Comet Mine in sec. 11 has been worked considerably in the past, some evidence of gold and silver being present. Numerous unpatented claims are scattered throughout the area. The only patented claims lie in sec. 4.

**Watering places:** Sycamore Creek carries the largest stream of water the year round; Ram Valley Creek has intermittent water above sec. 21, springs in the latter section feed a stream of water for a  $\frac{1}{4}$  mile above the creek's intersection with Sycamore Creek in section 20. Several other creeks carry intermittent water in the western part of the Tp. There are springs of living water in sec. 1, 11, 4, 5, 6, 7, 14, 15, 16, 17, 21, 22, 23, 24, 33, and 36.

**Settlement:** settlers are living in secs. 4, 9, 17, and 7. A large transient camp is built in sec. 17, NW $\frac{1}{4}$ . Improvements generally consist of houses, fences, wells and smaller buildings, and cement troughs with pipe lines.

**Roads:** The Bush Highway crosses longitudinally across the W. side of Tp.; there are several other fair roads and an old road which once was used to connect Forts McDowell and Reno which crosses the Mazatzal divide is now nothing more than a trail.

**General:** All lands are within the Tonto National Forest with its Sunflower R.S. in sec. 6. A stock drive crosses NE and SW from secs. 12 and 13 to secs. 32 and 33. In connection with the drive a large watering reservoir is located in sec. 22. The lands are used chiefly for grazing.
