FIELD NOTES

OF THE

Survey of the Subdivisional Lines of Township 35 North, Range 13 West,

4289

[Lined area for field notes]

Of the Gila and Salt River Meridian,

In the State of Arizona

EXECUTED BY

Horace M. Muscott, Surveyor.
Claude F. Warner, Transitman, and
Frank Motch, Public Land Surveyor.

General Land Office

Under special instructions dated February 15, 1939, which provided
for the surveys included under Group No. 213, bearing the approval of the
Commissioner of the General Land Office under date of May 29, 1939
and assignment instructions dated April 11, 1939

Survey commenced August 16, 1939.

Survey completed September 9, 1939.

| 21 | 45 22 | 34 23 | 23 24 | 13 25 | 3 26 |

The surveys herein described were executed with Buff and Buff transit No. 16723, Buff and Buff transit No. 9984, and Young and Sons transit No. 8526. Each of these instruments is equipped with an improved Smith solar attachment and otherwise conforms to the standard specifications of the General Land Office. The instruments were examined by the District Cadastral Engineer for California and Arizona prior to the beginning of the surveys of this group, and were approved conditional upon satisfactory field tests.

The azimuths of all the lines of survey herein described were determined with the solar attachments.

All measurements were made with Dietzgen steel tapes, 5 chains in length, graduated every link for the first 100 links, and the remainder at intervals of 10 links. The tapes were tested by comparison with a Lufkin standard tape and found to be correct. All of the measurements were made on the slope, the vertical angle of each interval determined with a clinometer in good adjustment, and the horizontal equivalents entered in the field notes.

The data furnished with the special instructions give the geographic position of the SE. corner of the Tp. as follows: latitude $36^{\circ} 22' 47''$ N. and longitude $113^{\circ} 37' 42''$ W.

August 12, 1939; at camp in the SE $\frac{1}{4}$ of sec. 36, T. 36 N., R. 13 W., G and S. R. Meridian, Arizona, latitude $36^{\circ} 28\frac{1}{2}'$ N., longitude $113^{\circ} 37\frac{1}{4}'$ W., examine the adjustments of Buff and Buff transit No. 16723 and find no errors; then, to test the solar apparatus of same by comparing its indications with a true meridian established by Polaris observation, proceed as follows:

At 10h. 23.3m., p.m., l.m.t. observe Polaris at eastern elongation, making six observations, three each with the telescope in direct and reversed positions, and mark the mean point in the line thus determined by a nail in a stake driven firmly in the ground about 7 chs. North.

Azimuth of Polaris at eastern elongation: $1^{\circ} 16' 42.5''$.

August 13, 1939: on the meridian heretofore described, at 4h. 20.5m. a.m., l.m.t., observe Polaris at upper culmination, making 3 direct and 3 reversed readings of the altitude, the mean of which is $37^{\circ} 31' 45''$. The reduced latitude is $36^{\circ} 28' 50''$.

At 9h. 19 $\frac{1}{2}$ m. a.m., l.m.t., I observe Sirius on the meridian, the mean of 1 direct and 1 reversed reading of the altitude is $36^{\circ} 55' 00''$. The reduced latitude is $36^{\circ} 28' 16''$.

The mean of these two observations gives a result in substantial agreement with latitude as computed from the data furnished.

August 13, 1939:

At 7 a.m. lay off the azimuth of Polaris $1^{\circ} 16\frac{1}{2}'$ to the west, and mark the meridian thus determined by a sight on a tree about 20 chs. N.

At 8h.00m., a.m., app.t., set off $36^{\circ} 28\frac{1}{2}'$ N. on the lat. arc; $14^{\circ} 50\frac{1}{2}'$ N. on the decl. arc, and determine a meridian with the solar, which agrees with the true meridian.

At app. noon, with the lat. arc unchanged, observe the sun on the meridian and obtain a reading of $14^{\circ} 47' N.$ on the decl. arc, which agrees with the computed declination of the sun.

At 4h.00m., p.m., app.t., with the lat. arc unchanged, set off $14^{\circ} 44\frac{1}{2}' N.$ on the decl. arc and determine a meridian with the solar, which agrees with the true meridian.

As all solar observations made during the usual hours of solar work come within $1' 30''$ of the true meridian, conclude that the instrument is in satisfactory adjustment.

August 13, 1939; at same station as above and using same true meridian, test the solar apparatus of Buff and Buff transit No. 9984 as follows:

At 8h.00m., a.m., app.t.; set off $36^{\circ} 28\frac{1}{2}' N.$ on the lat. arc; $14^{\circ} 50\frac{1}{2}' N.$ on the decl. arc; and determine a meridian with the solar, which agrees with the true meridian.

At app. noon, with the lat. arc unchanged; observe the sun on the meridian and obtain a reading of $14^{\circ} 47' N.$ on the decl. arc, which agrees with the computed declination of the sun.

At 4h.00m., p.m., app.t., with the lat. arc unchanged; set off $14^{\circ} 44\frac{1}{2}' N.$ on the decl. arc and determine a meridian with the solar, which agrees with the true meridian.

As all solar observations made during the usual hours of solar work come within $1' 30''$ of the true meridian, conclude that the instrument is in satisfactory adjustment.

August 13, 1939; at same station as above and using same true meridian, test the solar apparatus of Young and Sons transit No. 8526 as follows:

At 8h.00m., a.m., app.t.; set off $36^{\circ} 28\frac{1}{2}' N.$ on the lat. arc; $14^{\circ} 50\frac{1}{2}' N.$ on the decl. arc; and determine a meridian with the solar, which agrees with the true meridian.

At app. noon, with the lat. arc unchanged; observe the sun on the meridian and obtain a reading of $14^{\circ} 47' N.$ on the decl. arc; which agrees with the computed declination of the sun.

At 4h.00m., p.m., app.t., with the lat. arc unchanged; set off $14^{\circ} 44\frac{1}{2}' N.$ on the decl. arc and determine a meridian with the solar, which agrees with the true meridian.

As all solar observations made during the usual hours of solar work come within $1' 30''$ of the true meridian, conclude that the instrument is in satisfactory adjustment.

Survey: Subdivision Lines: T. 35 N., R. 13 W.

BOOK 4289

Chains

Commence the survey of the subdivision lines of T. 35 N., R. 13 W. at the cor. of secs. 1, 2, 35, and 36, on the S. bdy. of the Tp., which is an iron post, 2 ins. in diam., set, marked, and witnessed as described in the official record.

Thence,

N. 0° 01' W., bet. secs. 35 and 36.

Over rolling land, thru moderate timber and dense undergrowth.

Asc. 55 ft. over SW. slope to

10.00 Top of flat spur, slopes SE. Along E. slope to

21.80 Gulch, course S. 60° E. Asc. 88 ft. over SE. slope to

37.00 Top of spur, slopes S. 70° E. Desc. 22 ft. over NE. slope to

40.00 Set an iron post, 3 ft. long, 1 in. in diam., 18 ins. in the ground to solid rock, and in a mound of stone to top, for the 1/4 sec. cor., with brass cap marked

1/4

S35|S36

Land, mountainous.

Soil, rocky clay and limestone, 3rd. and 4th. rates.

Timber, pinyon and juniper.

Undergrowth, sage, oakbrush, thorny locust, manzanita, cliff rose and cacti. Poor grass.

GENERAL DESCRIPTION.

The land in T. 35 N., R. 13 W. varies from rolling in the southern portion, to mountainous and broken, in the northern portion of the township where deep canyons are formed which flow into Hidden Canyon. The elevation varies from approximately 4500 to 6500 ft. above sea level. The Grand Wash cliffs, appearing in the west tier of secs. and sec. 32, consist of broken cliffs and sheer bluffs 125 ft. to 200 ft. high. These are known as the upper-Grand Wash cliffs. The soil is generally a gravelly to rocky clay and a sandy limestone is found in the broken areas.

The drainage forms three main canyons which drain northerly into Hidden Canyon. Dry Canyon heads in the NE. cor. of sec. 33 and leaves the township west of the cor. of secs. 1, 2, 35 and 36, on the N. bdy. Rattlesnake Canyon flows northerly through the central portion of the township. Last Chance Canyon heads in sec. 29 and leaves the township on the N. bdy. of sec. 4. The only permanent water in the township is found in two springs. A spring in Rattlesnake Canyon, located in the $SE\frac{1}{4}$ of the $NW\frac{1}{4}$ of sec. 3, is piped into an earth reservoir. It has an ample flow of good water. A second spring is found in Last Chance Canyon, located in the $SW\frac{1}{4}$ of the $NE\frac{1}{4}$ of sec. 4.

It has a very limited flow of good water, which is piped a few feet to a small galvanized iron tank.

Nearly all of the township is covered with a moderate growth of juniper and pinyon timber. The undergrowth covering most of the township is quite dense, especially on the north slopes, and consists of sage, cliff rose, oakbrush, blackbrush, thorny locust, algerita, and cacti.

The only roads to be found in the township are a few dim wagon roads used by stockmen. No improved roads or trails are in evidence.

There are no settlers in the township, and no mineral developments were found at the time of survey.

The approximate mean magnetic variation is 16° E.

FINAL FIELD TESTS OF INSTRUMENTS.

September 13, 1939; at camp in the $SE\frac{1}{4}$ of sec. 36, T. 36 N., R. 13 W., G. and S. R. Meridian, Arizona; latitude $36^{\circ} 28\frac{1}{2}'$ N., longitude $113^{\circ} 37\frac{1}{2}'$ W., to test the solar apparatus of Buff and Buff transit No. 16723 by comparing its indications with the true meridian established at this station on August 12, 1939, by Horace M. Muscott, Surveyor, by Polaris observation as hereinbefore described, proceed as follows:

At 8h.00m., a.m., app.t., set off $36^{\circ} 28\frac{1}{2}'$ N. on the lat. arc; $4^{\circ} 00\frac{1}{2}'$ N. on the decl. arc; and determine a meridian with the solar, which agrees with the true meridian.

At app. noon, with the lat. arc unchanged; observe the sun on the meridian, and obtain a reading of $3^{\circ} 56'$ N. on the decl. arc, which agrees with the computed declination of the sun.

At 4h.00m., p.m., app.t., with the lat. arc unchanged; set off $3^{\circ} 53'$ N. on the decl. arc; and determine a meridian with the solar, which agrees with the true meridian.

September 13, 1939: at same station as above and using same true meridian, test the solar apparatus of Young and Soms transit No. 8526 as follows:

At 8h.00m., a.m., app.t., set off $36^{\circ} 28\frac{1}{2}'$ N. on the lat. arc; $4^{\circ} 00\frac{1}{2}'$ N. on the decl. arc; and determine a meridian with the solar, which agrees with the true meridian.

At app. noon, with the lat. arc unchanged; observe the sun on the meridian and obtain a reading of $3^{\circ} 56'$ N. on the decl. arc, which agrees with the computed declination of the sun.

At 4h.00m., p.m., app.t., with the lat. arc unchanged; set off $3^{\circ} 53'$ N. on the decl. arc; and determine a meridian with the solar, which agrees with the true meridian.

September 16, 1939; at same station as above, and using same true meridian, test the solar apparatus of Buff and Buff transit No. 9984 as follows:

At 8h.00m., a.m., app.t., set off $36^{\circ} 28\frac{1}{2}'$ N. on the lat. arc; $2^{\circ} 51\frac{1}{2}'$ N. on the decl. arc; and determine a meridian with the solar, which agrees with the true meridian.

At app. noon, with the lat. arc unchanged; observe the sun on the meridian, and obtain a reading of $2^{\circ} 47'$ N. on the decl. arc, which agrees with the computed declination of the sun.

At 4h.00m., p.m., app.t., with the lat. arc unchanged; set off $2^{\circ} 44'$ N. on the decl. arc; and determine a meridian with the solar, which agrees with the true meridian..

As all of the solar observations made during the usual hours of solar work come within $1' 30''$ of the true meridian, conclude that the instruments are in satisfactory adjustment and have remained in such condition throughout the survey.

CERTIFICATE OF SURVEYOR

General Land Office

I, Claude F. Warner, Transitman, / General Land Office, HEREBY CERTIFY upon honor that, in pursuance of special instructions bearing date of the 15th day of February, 1939, received from the district cadastral engineer for Arizona, with assignment instructions dated April 11, 1939, I have surveyed part of the subdivisional lines in Township 35 North, Range 13 West,

of the Gila and Salt River Meridian, in the State of Arizona, which are represented in the foregoing field notes as having been executed by me and under my direction; and that said survey has been made in strict conformity with said instructions, the Manual of Instructions for the Survey of the Public Lands of the United States, and in the specific manner described in the foregoing field notes.
