Township 17 North, Range 28 East
Gila and Salt River Meridian, Arizona

CHAINS	
	<p>The south boundary, the fourth standard parallel north, the east, west and north boundaries and subdivisional lines were surveyed by H. A. Coe in 1882. The south boundary was resurveyed by Murphy and Bauer in 1963.</p> <p>The following notes are those of a dependent resurvey of the east, west and north boundaries and subdivisional lines, designed to restore the corners in their true original location according to the best available evidence; the dependent resurvey of a portion of the south boundary and the survey of subdivisions in Section 34, Township 17 North, Range 28 East, Gila and Salt River Meridian, Arizona.</p> <p>The survey was executed in accordance with the specifications as set forth in the Manual of Surveying Instructions, 1947, and the Special Instructions dated August 16, 1966.</p> <p>Only the true line bearings and horizontal distances for the surveyed lines are given in these notes. Unless otherwise described, each corner was monumented with a standard iron post, 30 ins. long, 2½ ins. diameter, flanged at the base and with a brass cap riveted to the top.</p> <p>The geographic position of the southeast corner of the township as scaled from Saint Johns, Arizona, New Mexico, quadrangle map is: Latitude, 34°49'14" North, Longitude, 109°18'45" West.</p> <p>The mean magnetic declination was found to be 14° East.</p>

General Description

The land in township 17 North, Range 28 East, varies from nearly level to gently rolling. The soil is sandy loam cut by numerous small washes and gullies which drain the area in a southerly direction.

Timber is primarily cedar, scattered in the S. and SE. portions, moderate in the central and heavy in the N. Central part of the Tp. Timber railing has been conducted along the West side, in section 1 and in a small area near the center of the Tp.

Indian ruins, characterized by scattered flint, broken pottery, scattered stones and stone rings, are found in sections 22 and 35. The sites are located on small knolls with evidence extending out about 10.00 chs. in each direction.

Grazing of livestock is the primary interest as there is a fair growth of native grass, with windmills, stock ponds and Woford Spring affording a continual water supply.
