## CHAINS

The following field notes describe the dependent resurvey of a portion of the east boundary, a portion of the subdivisional lines, and a portion of the subdivision of section lines in section 25, the subdivision of the SW 1/4 of section 25 and a metes-and-bounds description of a parcel of land acquired by the Salt River Pima Maricopa Indian Community in section 25, Township 3 North, Range 5 East, Gila and Salt River Meridian, Arizona.

The history of surveys pertaining to this survey is as follows:

The east boundary of section 25, was surveyed by Sydney E. Blout in 1914 and resurveyed by Ty White and Claude F. Warner in 1950. The south boundary of section 25, which was identical with the north boundary of the Salt River Indian Reservation, was surveyed by L.D. Chillson in 1888 and resurveyed by Robert A. Farmer in 1911. The east half the south boundary of section 25, was resurveyed by Ty White and Claude F. Warner in 1950. The west half of the south boundary of section 25 was resurveyed by Gordon R. Bubel in 2008. The N. and W. boundaries of section 25 were surveyed by Sydney E. Blout in 1914 and resurveyed by Ty White and Claude F. Warner in 1950. The NE, SE and NW 1/4 sections of section 25, were subdivided by Ty White and Claude F. Warner in 1950. In 1995, Public Law 104-102, "Saddleback Mountain Arizona Settlement Act of 1995", was enacted. This law allowed for the acquisition of portions of section 25, for the Salt River Pima Maricopa Indian Community. In 1995, Robert J. Pecha, Arizona R.L.S. No. 21080, in compliance with provisions within Public Law 104-102, executed a survey in section 25, identifying the Salt River Pima Maricopa Indian Community acquired land.

The survey was executed in accordance with the specifications as set forth in the Manual of Surveying Instructions, (2009), the Special Instructions dated January 7, 2015 and Supplemental Special Instructions dated February 12, 2015, for Group Number 1141, Arizona.

The true meridian direction and length of all lines were determined by real time kinematic global positioning system observations using Trimble Navigation R8 model receivers.

Preliminary to the resurvey, the lines of the prior surveys were retraced and search was made for all corners and other calls of record. Identified corners were remonumented in their original positions. Lost corners were reestablished and remonumented at proportionate positions based on the official record. The retracement data were thoroughly verified and only the true line field notes are given herein.
