The remaining 3/4 interest of said Shaft, No 6, Illaworra lode are credited 1/4 each to the Ballarat Summit and Sunny Side lodes.

The surface rises about 700 feet above Shaft No 6 near the South endline of the Ballarat from which the slope is downward through the Summit <sup>lode</sup> on one side & the Sunny side lode on the other. So that the lode of of the three above named claims will be cut by drifts from this No 6 Illaworra shaft. & ~~xxxx~~

The topography shows that the position of said shaft No 6 is the most practical place from which to develop the entire group.

Local conditions, such as the cheaper, & most desirable place to take fuel and water, also makes it, & shows that it tends to develop the three above named claims to gather with it ~~xxxx~~ Illaworra lode.
