I, Franklin W. Smith, United States Deputy Mineral Surveyor, do hereby certify that in addition to the improvements reported in the field notes of the survey of the above named lode mining claims by George C. Clark, United States Deputy Mineral Surveyor, the following improvements were made before the date of the expiration of the period of publication of the notice of application for patent. George C. Clark, the U. S. Deputy Mineral Surveyor, who made the official Mineral Survey, has removed from the Territory of Arizona, and I am thoroughly familiar with the conditions existing on the ground in connection with these claims, as well as with the work and report originally submitted by George C. Clark.

None of the additional work herein accredited to these claims has been accredited at any time to any other claims. A 14/23 portion of the expense of sinking the shaft hereinafter mentioned, has been accredited as improvements on the claims embraced in Mineral Survey No.1953 and 2019, and the amount accredited to the claims embraced in Mineral Survey Nos. 1953 and 2019 together with the amount accredited to the claims embraced in this survey do not in the aggregate exceed the amount of the expense of sinking the said shaft. The additional improvement made for the benefit of these claims is the main working shaft on the June Bird mining claim, which claims adjoins the Columbia

Gold Hill mine, and James Carretto claims on the northwest; the said shaft being situated about 500 feet from the end center of the Columbia ~~Hill~~ mine. This shaft is 6' x 17.7' x 62 ft deep, and is well timbered and constructed, to be used as the main working shaft of the entire group of claims of the Bisbee Queen Development Company, and is located practically in the center of the entire group, at a point which is convenient for the transportation of heavy mining machinery and was sunk at an actual cost of \$4600. This shaft is an improvement and development of all the claims embraced in this survey, and is the only available means whereby the richer deposits of ore which occur beneath the surface of said claims can be economically extracted, and will therefore be used in the future for that purpose.

It has been proven by the experience of other mining companies operating in the Warren Mining District, that the ore bodies when they exist as deposits in the carboniferous lime (as they do in these claims) are most economically developed by vertical sinking and cross-cutting, supplemented by raises and winzes. This method of development is used by the following among other mining companies: The Copper Queen Consolidated Mining Company, the Lake Superior & Pittsburg mining Company, The Calumet & Pittsburg mining Company, the Junction Mining Company, the Baginaw Development Company, the Denn-Arizona Development Company, all of which companies are developing or have developed groups of fifteen or more claims.

Inasmuch as every foot obtained in depth is an approach to the level at which drifts may be run through the claims of this group in the reasonable hope of encountering ore, the main shaft on the June Bird lode, which will be used as the main working shaft must justly be considered as tending to develop the claims of this group.

The remaining  $9/23$  interest in the main shaft on the June Bird lode has been allotted to the claims of this survey as follows:

JAMES GARRETTO:

An undivided  $3/46$  interest in the value of the main working shaft on the June Bird lode to be accredited to this claim

\$300.00

COLUMBIA GOLD HILL.

An undivided  $3/46$  interest in the value of the main working shaft on the June Bird lode, to be accredited to this claim

CERTIFICATE.

DEPARTMENT OF THE INTERIOR,  
Office of the U. S. Surveyor-General,

Phoenix, Arizona, Jan. 16, 1906.

-----

I, Frank S. Ingalls, U. S. Surveyor-General for the District of Arizona, hereby certify that in addition to the improvements reported at the time of survey, on the James Carretto, Columbia Gold Hill, Gold Hill Mine, Remember the Main, Piedmont and Puzzle Lodes, included in Mineral Survey No. 1958, a 9/23 interest in the main shaft on the June Bird Lode, included in Mineral Survey No. 2019, but unsurveyed at the time Survey No. 1958 was executed, could have been properly credited for the development of the claims embraced in Survey No. 1958, as the work in said shaft was done prior to the expiration of the period of publication of notice of application for patent of the claims embraced in Survey No. 1958. The claims embraced in Mineral Surveys Nos. 1953, 1958 and 2019 form one contiguous body of ground owned by the Bisbee Queen Development Company; and the main shaft on the June Bird Lode is to be the working shaft from which all the claims of said surveys are to be developed, as more clearly set forth in the hereto attached report of Franklin W. Smith, U. S. deputy mineral surveyor; and that said shaft is clearly for the benefit of each and every claim embraced in said surveys.

I further certify that the value of the 9/23 interest in the said June Bird shaft, to be credited to the claims embraced in Mineral Survey No. 1958, is not less than \$1800.,

-2-

or \$300.00 for each claim in the group, and that no portion of said interest so credited has heretofore been applied to the development of any other claims, under the statutory requirement of \$500.00 improvements upon or for each location.
