### Instrument

This survey was made with a Young and Sons light mountain transit, with a Smith's solar attachment. The courses were deflected from the true meridian as determined by direct solar observations and Polaris observation. The distances were measured with 50 ft and 100 ft. steel tapes.

### Polaris observation

January 16<sup>th</sup>: 1905, At Cor. No 1 Imperial lode, I observed Polaris at 11<sup>h</sup> 37<sup>m</sup> P. M., l. m. t., at western elongation and I marked the line with an iron rod set 500 ft. North of cor.

January 17<sup>th</sup>: At 7<sup>h</sup> A. M., l. m. t., I deflected 1026' to the east, from the line marked on the ground.

From the meridian thus established I deflected lines of survey

## Establishment of U. S. Location Monument No 2006

Aravaipa Mining District, Graham Co.  
Arizona.

There being no U. S. Location Monument nor any corners of the public land surveys within 2 miles of Survey No 2006, I proceed to establish one, as follows:

I select the highest and most prominent point on Imperial Hill, situated on the Apex lode, where I set a pine post 6 ins. square, 10 ft long, 3 ft in the ground, surrounded by a mound of stone, scribed U. S. L. M. No 2006 Aravaipa M. D., whence

A cross (x) and U. S. L. M. - B. R. 2006, chiseled on a porphyry boulder 5 x 4 x 4 ft, above surface, bears S 79° 30' W - 32.7 ft.

A cross (x) and U. S. L. M. - B. R. 2006, chiseled on a porphyry boulder 2 x 2 x 1 ft, above surface, bears S 40° 15' W - 14.9 ft.

Mount Turnbull, bears N 25° 10' E  
South Peak of Saddle Mountain  
bears N 80° 10' W

Round Peak, bears S 55° W

High Peak Stanley Butte, bears  
N 16° 10' W

Pa. 13° 10' E.

Instrument used to determine bearings is a Young & Sons Light Mountain transit, with a Smiths Solar attachment. The bearings were deflected from the true meridian, determined by Solar and Polaris observations. Distances were measured with a 50 ft. steel tape.
