#### INSTRUMENT

This survey was made with a Young & Son Light Mountain transit, with Smith solar attachment. The courses were deflected from the true meridian as determined with the solar attachment and checked on the lines of Surveys Nos. 1400, 1406 and 2033, which practically agree. The distances were measured with a one hundred foot steel tape.

#### NOTE:

The bearings and distances given in the location notice differ from the bearings and measurements given in this survey; however, said location was marked upon the ground as represented in the foregoing field-notes.
