Note: The claimants state that at the present, work on the group is concentrated at the main shaft situate at on the Hazlewood No. 3 lode which is being sunk and drifts run for the purpose of developing the groupa as a unit. The shaft is a perpendicular working shaft not sunk on a vein, is timbered in a workmanlike manner and the work is prosecuted by means of power drills with day and night shifts of men. The situation is well chosen for this purpose as the ground rises rapidly at the west, north, and east slopes but slightly to the southerest - #

Hence I consider this shaft as common improvement to the ten locations and assign one tenth of its value, \$463.50 to each.

#### . INSTRUMENT.

This survey was made with a Young & Sons Mountain Transit No. 6855, provided with Smith solar attachment. The courses were deflected from true meridians as obtained by direct solar observations. The measurements were made with 500 and 50 ft. steel tapes.

Any discrepancies between this survey and notices of location are due to errors in the latter.
