INSTRUMENT

This survey was made with a Gurley solar transit, the courses were deflected from the meridian as determined by direct solar observations. The distances were measured with 100.0 and 500.0 ft. steel tapes.

REPORT

The lode lines of these claims were run direct upon the ground and the corners were established by means of offsets from the lode lines. The tie lines were run direct upon the ground.

From the common improvement, No.3 shaft on Sink to Rise lode the surface descends slightly to the (east, also descending to the west over rolling ground, ascending to the north) and descending to the south, this shaft is so situated that by drifting, sinking, and drifting each lode in the claim can be developed.

This diagram is to give locator a general idea of plan of location under the new law. The Discovery Shaft can be in the center of claim or any distance from either end desired. In the diagram it is placed 500 feet from one end and 1000 feet from the other. Commence description of claim at a center end monument, giving its distance and direction from center of Discovery Shaft; thence bound the claim in either direction. In description be careful to state locality of claim with reference to some natural object, or permanent monument, as will identify the claim.
