An undivided 1/44th. interest in this improvement is accredited to this lode. Value \$ 569.00

This improvement being centrally located in the South third of the property, is a practicable and feasible main working for the property as by sinking, drifting and cross-cutting towards and under each of the several claims of this group, from this centrally located main working, the entire group may be advantageously developed and the ore extracted therefrom.

This group of claims is approximately bisected by a small range of mountains running NE. and SW. and the general tendency of the surface topography is to slope downward to the NW. and SE. from the crest or top of this range. The main working is advantageously located from a mining viewpoint, and at its present depth, the bottom is below the surface of each of the several claims embraced in this group, making it practical as well as possible to extend lateral workings from the present workings, and intersect the ore bodies lying under each claim of the entire group thereby facilitating the extraction of the ore from the property.

This improvement consisting of tunnels, winzes, crosscuts & drifts is therefore a common improvement which redounds to the benefit of each claim of the entire group, and the whole thereof; and an undivided 1/44th. interest (\$569.00) of the total value (\$25,036.00) of this improvement is hereby assigned to each claim of the group.

Instrument

This survey was made with a W. & L.E. Gurley light mountain transit.

The courses were deflected from true meridians determined by direct solar observations, and checked with a Burt solar attachment during the progress of the survey.

The distances were measured with 50 ft. and 660 ft. steel tapes.

Report

The lines of the several locations of this claim were run directly upon the ground; and the tie lines, except those nearest the U.S.L.M. No. 3772 are calculated by traverse through the lines of the several locations of this claim. All of the locations of this claim are tied to U.S.L.M. No. 3772 which was established because of the fact that no public land survey corner existed within the two mile limit of any portion of this survey.

The courses of Montana, Montana Nos. 1 and 2; St. Charles Nos. 1-2-3-4-5-6 & 7 and Gail Borden Nos. 3-4-5 & 6 lodes are in error as given in location notices, the same being correctly given in these notes.
