## SURVEY NO. 4446

Chains  
Feet

This survey was made with a C. L. Berger & Sons transit, No. 15045, with horizontal limb  $6\frac{1}{4}$  ins. diam., having two double opposite verniers, and full vertical circle 5 ins. diam., having one double vernier; the verniers read to one minute of arc. The instrument was in good condition at the time of the survey and all adjustments were in good order.

All azimuths in the record were determined by the method of deflection angles referred to the meridian determined by a direct observation on the sun for azimuth from the  $\frac{1}{4}$  cor. between secs. 22 and 23, to the cor. for secs. 22, 23, 26 and 27, all of T. 22 N., R. 17 W., G.&S.R. B&M. True bearing S.  $0^{\circ} 05'$  W.

The lines were measured with a Lufkin steel tape, 300 ft. in length, graduated every foot for 299 ft. and the remaining foot graduated to tenths and hundredths.

All lines and connections of this survey were run by direct methods.

The geographic position at cor. No. 1 of this survey is latitude  $35^{\circ} 16' 50''$  N. and longitude  $114^{\circ} 04' 30''$  W.

The magnetic declination observed at each corner of the survey gave a uniform value of  $14^{\circ} 45'$  E.
