This survey was made with a Gurley transit No. 50962, with horizontal limb 6.25 ins. diam., having two double opposite verniers, and full vertical circle 5 ins. diam.; the verniers read to one minute of arc; the eyepiece is equipped with a colored glass for making direct observations upon the sun. The instrument was in good condition at the time of the survey and all adjustments were in good order.

All azimuths in this record were determined by the method of deflection angles referred to the meridian determined by the following observation:

August 11, 1960, at cor. No. 4 of the Sunset Mining Claim #4 lode, in latitude $34^{\circ}35'10''$ N., and longitude $111^{\circ}20'30''$ W., turning from cor. No. 1 Sunset Mining Claim #4 lode to the sun.

True course of line 4-1 Sunset Mining Claim #4 is S. $83^{\circ}53'$ W.

The lines were measured with a Lufkin steel tape 300 ft. in length, graduated every foot, the first and last foot being graduated to tenths and hundredths; the tape was compared with a Lufkin standard tape at the beginning of the survey and found correct.

All lines and connections of this survey were run by direct methods.

The magnetic declination observed at each corner of the survey gave a uniform value of 15° E.
