Section 22&27	Township 23 North Range 18 West Meridian Gila & Salt River
Survey commenced Feb. 5, 1973	Survey completed June 15, 1973 Name of Mineral Surveyor Robert Lenon

FEET	<p>This survey was made with a Bausch and Lomb Precise Transit, No. 9259, with horizontal limb 5-1/2 ins. diam., having two single opposite verniers, and full vertical circle 4-1/4 ins. diam., having two double opposite verniers, all verniers reading to one minute of arc; the instrument was in good condition at the time of the survey and all adjustments were in good order. The eyepiece is equipped with a colored glass set in the dust shutter for making direct observations upon the sun.</p> <p>All azimuths in this record were determined by the method of double horizontal angles referred to the meridian determined by the following observations:</p> <p>June 13, 1973, at Cor. No. 2 of the Copper Hill No. 2 lode, in latitude <math>35^{\circ}21'45''</math> N., and longitude <math>114^{\circ}12'</math> W., I make a series of four altitude observations upon the sun for azimuth at approximately equal time-intervals, two each with the telescope in direct and reversed positions, observing opposite limbs of the sun, and reading the horizontal angles counterclockwise from Cor. No. 3 of the Copper Hill No. 2 lode, 1495 ft. NE'ly, W'ly to the sun.</p> <p style="text-align: right;">(1) (2)</p> <p>Mean time of observation, 105th meridian standard time:      <math>4^{\text{h}}27^{\text{m}}</math> p.m.      <math>4^{\text{h}}34^{\text{m}}</math> p.m.</p> <p>Declination of sun at mean time of observation:      <math>23^{\circ}14'45''</math> N.</p> <p>Mean observed vertical angles to sun's center:      <math>38^{\circ}26'00''</math>      <math>37^{\circ}36'30''</math></p> <p>Mean horizontal angles from reference point to sun's center:      <math>129^{\circ}52'</math>      <math>129^{\circ}20'</math></p> <p>True bearing to reference point:      N. <math>43^{\circ}00'50''</math> E.</p> <p>The lines were measured with a Lufkin steel tape, 500 feet in length, graduated every foot, with the end feet graduated to tenths and hundredths; and a Chicago steel tape, 300 feet in length, graduated every foot, with the end feet graduated to tenths; both tapes were compared with a Lufkin standard at the time of beginning the survey and found correct.</p> <p>All lines and connections of this survey were run by direct methods.</p> <p>The magnetic declination observed at each corner of the survey gave a uniform value of <math>14^{\circ}30'</math> E.</p>	
	<p>SURVEY No. 4732A</p> <p>Valley Copper No 1 LODE</p> <p>At Cor. No. 1 of the Valley Copper No 1 lode, identical with Cor. No. 1 of the Jimtown Copper No. 1 lode of this survey, being also identical with the W'most cor. of the Jimtown Copper No. 2 lode, unsurveyed.</p>

	An interest in common improvements to the Copper Hill No. 2, Valley Copper No. 3, and Valley Copper No. 2 lodes, described as follows:
A-3	A diamond-drill hole, 3 inches in diameter, vertical to a depth of 424 ft., the center of which bears N. $40^{\circ}15'$ E., 192 ft. from Cor. No. 1, Copper Hill No. 2 lode. Value, \$4250.

111.33	These improvements have been made for the development of the Copper Hill No. 2, Valley Copper No. 3, and Valley Copper No 2 lodes, which are three contiguous lode claims owned in common within the range of benefit of said lodes, and of no value, except
111.33	The ore currently being mined and processed from the body lying principally on the Hermes No. 2 and Jimtown Copper No. 1 lodes is somewhat tabular in form, dipping at a low angle from the horizontal, to the Northwest, where it, as well as possible similar beds, can reasonably be expected to be encountered in the earth cut by these two holes, which afford the most practical and economical means of ascertaining facts concerning these formations at depth.
111.33	Five hundred dollars over has been expended in this improvement in such a manner as tends to the development of each lode of this survey subsequent to its location and to the time since which common ownership and contiguity have prevailed; therefore, an undivided one-third interest in their value is hereby credited to each of the said lodes, as follows:
111.33	One-third value, \$2433.33
111.33	No portion of, or interest in, these improvements has been credited heretofore as patent expenditure to any lode claim.
	OTHER IMPROVEMENTS
	Crushing equipment, conveyor belts, and a copper concentrator, together with auxiliary structures (shops, office trailers, tanks) and a water system. Improvements situated as shown on plat.
	Claimant herein.
	OTHER CORNER DESCRIPTIONS AND SUPPLEMENTAL DATA
	The Ely half-mile of the line common to Secs. 22 and 27 was found to be correct as approved. The SW most corner of said Sec. 22 falls in the center of the (oiled) County Road from Kingman to Chloride and had been obliterated. I re-set same from the record, by extending the line of the Ely half-mile Wly. The resulting point, which I marked with a track spike set in the center of the said County Road, checks well with nearby ties, also.

CERTIFICATE OF SURVEYOR

Name of Mineral Surveyor	ROBERT LENON	Date	June 28, 1973
--------------------------	--------------	------	---------------

I HEREBY CERTIFY That in pursuance of an order received from the Bureau of Land Management, at Phoenix, Arizona, dated January 23, 1973, I have carefully executed the survey of the claim of the El Paso Natural Gas Co. known as the (lode, placer, or mill site) Emerald Isle Group situated in Secs. 22 and 27, Township 23 N., Range 18 W., Gila and Salt River Meridian, in the State of Arizona.

This survey, designated as number 4732A & B has been executed by me and under my direction and has been made in strict conformity with said order, the Manual of Instructions for the Survey of Public Lands of the United States, and in specific manner described in the foregoing field notes.

I FURTHER CERTIFY That the labor expended and improvements made upon and for the benefit of the ~~Holder or placer~~ seven (7) lode and fifteen (15) Mill Site location(s) embraced in the said mining claim by claimant(s) or its grantors are fully stated in my report. The character, extent, location, and itemized value are specified in full detail. No portion of, or interest in, said labor and improvements so credited to this claim has been included in the estimate of expenditures upon any other claim.
