Dec 17-1900

No. 1114

General Description

This township is generally extremely rough and mountainous, being traversed by many deep rugged Cañons tributary to the Cataract Cañon which passes through the western portion in a southerly direction and is impassable at any point in this township.

The soil is generally rocky and covered with a dense growth of "Buck brush" - which grows to a height of from six to fifteen feet, and black sage - which grows brass high and greatly impedes travel.

There is no living water in this township. There is no settlers in this township.

The timber consists of Fir and Cedars, which in many places is very dense. Lines not run were impracticable to survey.

A P P R O V A L.

OFFICE OF THE UNITED STATES SURVEYOR GENERAL

Tucson, Arizona.

~~Dec~~ Mar 1, 1901.

The foregoing field notes of the survey of The Sub-levee of I.

317 R. 2nd Gen. of Salt River

executed by W. Oscar Jecor

under his contract No. 77, dated Aug.

29, 1900, having been critically

examined, and the necessary corrections

and explanations made, the said field

notes, and the surveys they describe,

are hereby approved.

U. S. Surveyor General for Arizona.
