General Description

Driftwood at the meander corner to fractional Secs 35 and 36 on North bank of the river lies in the branches of cottonwood trees 14 ft above the level of the water. 2 miles and 64 chains of the meander lines run through timber and dense brush.

The land in this Township is level, broken, rough, and rolling hills, and the soil ranges from sand and gravel to rich loam. The soil of the bottom land along the Gila River is generally rich loam capable of producing abundant crops with the aid of irrigation. The soil of the remaining portion

of the township except the sand and gravel beds along on each side of the river can nearly all be classed as good fruit land and with the aid of irrigation will produce good crops. Cottonwood and Willow timber is found scattered along the Gila River.

The township is well watered by the Gila River, which runs through the Southern portion of it.

There are two (2) settlers in Sec 32 and one (1) in Sec 28 on North side of the river. On the South side of the Gila river there is one (1) settler in Sec 34, two (2) in Sec 33 and two (2) in Sec 32 also two in Sec 31.

Mr Stout and Mr Gargas have each fenced a portion of
