Preliminary Oaths of Assistants.

BOOK 1449

BOOK 1449
BOOK BOOK

We Agred J McMillan
and Sylvester Laffin

do solemnly swear that we will well and faithfully execute
the duties of Chain Carriers; that we will level the chain over
even and uneven ground, and plumb the tally pins, either by
ticking or dropping the same; that we will report the true dis-
tance to all notable objects, and the true length of all lines that
we assist in measuring, to the best of our skill and ability and
in accordance with instructions given us in the survey of the

Exterior lines of
Trps. 22. and 23 N. R. 9 E.

of the principal base and meridian in the Territory of Arizona.

Agred J McMillan Chainman.

Sylvester Laffin Chainman.

Subscribed and sworn before me, this 4th

day of August 1882

Francis Jacobs
Notary Public.

My commission Expires March 2^d 1904

We *E. Vauzant Lybrook*
William M. Wilson *Harry M. Havens*
and *Joseph O. Sanders*

do solemnly swear that we will well and truly perform the
the duties of *Apemen* *Flagman*
and *meand man* respectively
in the establishment of corners and other duties according to
instructions given us, and to the best of our skill and ability,
in the survey of the *Exterior lines*
Tps. 22 N. R. 9 E.

of the principal base and meridian in the Territory of Arizona.

E. Vauzant Lybrook *Apeman*
William M. Wilson *Apeman*
Harry M. Havens *Flagman*
Joseph O. Sanders *Meand man*

Subscribed and sworn to before me this *4th*
day of *August* *1882*

Francis Jacobs
Notary Public.
my Commission Expires *march*
1884

Final Oaths with
Exts. Tp. 23 N., R. 9 E.

T. 22, N. R. 9, E.

Chs Survey commenced Aug. 9th 1902
and executed with a Gurley light
mountain transit No. —
with Burt solar attachment.
The horizontal limb is provided
with two double verniers placed
opposite to each other, reading
to single minutes of arc, which
is also the least count of the
verniers of the latitude and
declination arcs.

The instrument was examined,
tested on the true meridian at
Tucson, Arizona, found correct,
and was approved by the Surveyor
General for Arizona Jan. 7th 1902
Examined the adjustments of the
transit and correct the level
and collimation errors; then,
to test the solar apparatus

EAST BOUNDARY OF

by comparing its indications, resulting from solar observations, made during a.m. & P.M. hrs., with a true meridian determined by observations on Polaris, I proceed as follows:

Aug. 12th 1902: At the corner of Sps. 21. & 22. N. Rs. 9. & 10. E., latitude $35^{\circ} 12' 38''$ N., longitude $111^{\circ} 22' - 25''$ W. At 4 hrs, 10 m. P.M. l.m. t., I set off, $35^{\circ} 13'$ N. on the latitude arc; $15^{\circ} 04'$ N. on declination arc, and determined with the solar a true meridian, and mark a point thereof on a stone set firmly in the ground, 5 chs N. of the cor.

At 10 h. 1 m. P.M. by my watch, which is correct l.m. t., I observe Polaris at Eastern Elongation

T. 22. N R. 9. E.

in accordance with manual of Instructions, and mark a point on the line thus determined on a plug driven in the ground, 5 chs N. of my station, Aug 12th 1902

Aug. 10th 1902: At 7 h. 4 m. A.M. l.m.t., I lay off the azimuth of Polaris, $1^{\circ} 29'$ to the N., and mark the true meridian thus determined, cutting a small groove in the stone set Aug. 12th, on which the true meridian falls $\frac{3}{10}$ of an inch, N. of the mark determined by the solar. At 8 h. l.m.t., I set off $35^{\circ} 13'$, on latitude arc $14^{\circ} 52'$ N., on declination arc, and mark a point in the true meridian determined with the solar,

EAST BOUNDARY OF

by a cross on the stone already set, 5 chs N. of my station; this mark falls 0.4 ins. west of the true meridian established by the Polaris observation.

The solar apparatus by am & P.M. observations defines positions for true meridians about 16" E. and 21" W. of the true meridian established by Polaris observations; therefore, I conclude the adjustments of my instrument are satisfactory.

The mag. bearing of the true meridian at 8 A.M. is N. $14^{\circ}21'10''$ W., the angle thus determined reduced by the table on page 100 gives the mean mag. declination $14^{\circ}27'$ E.

T. 22, N.

R. 9, E.

I begin at the corner of T. 21
 & 22, N. R. 9 & 10, E. which is a
 volcanic stone, 20 x 18 x 12 ins., 15 ins.
 in the ground, marked with six notches
 on the N.E. S & W edges, from which;
 A juniper, 6 ins. in diam., bears N. 19°
 15' E., 81 lks. dist., marked T. 22, N.
 R. 10, E. S. 31, B. T.

A juniper, 8 ins. in diam., bears S. 70°

✓ I change old Con to refer
to Lps. 22+23 N.R.B.C
only

This township is broken and rough, and generally mountainous, with no fertile land.

There is no water on the township though it is covered by pine and cedar timber and the hill tops by a dense growth of small cedars and oak brush.

Francis B. Jacobs
U.S. Deputy Surveyor
October 10th 1902

Final Oath with

A P P R O V A L.

Office of the

United States Surveyor-General,

Phoenix, Arizona.

August 11, 1903.

The foregoing field notes of the survey of East & North Boundaries of T. 22 N., R. 9, East. of the Gila and Salt River Base and Meridian, in the Territory of Arizona.

Executed by *Francis B. Jacobs*

United States Deputy Surveyor under his contract No. 96, dated June 20 1902

having been critically examined, and

necessary corrections and explanations

made, the said field notes, and the surveys

they describe, are hereby approved

Hugh M. Rice

U. S. Surveyor-General.
