Subdivision of Tp. 9 N R 10 E.

Chains Survey commenced November 14, 1904 and executed with a W. and L.E Gurley Light Mountain Transit with solar attachment. Transit not numbered. The horizontal limb is provided with two double verniers placed opposite to each other, reading to single minutes of arc, which is also the least count of the verniers of the lat and decl. arcs. The instrument was examined, tested on the true meridian at Phoenix, found correct and was approved by the Surveyor General for Arizona,

I examine the attachments of the Transit and find them correct. Then to test the solar apparatus by comparing its indications resulting from solar observations made during A.M. and P.M. hours, with the true meridian determined by observations on Polaris, I proceed as follows:

At the standard cor. of Secs. 35 and 36 on the S. bdy. of the Tp. lat. $34^{\circ} 4' 26''$ N. long. $111^{\circ} 15' 36''$ west, at 4 hrs. 0 min. P.M. l.m.t., I set off $34^{\circ} 4-1/2'$ N. on the lat. arc $18^{\circ} 16'$ S. on the decl. arc and determine a meridian with the solar and mark a point thereof on a stone set firmly in the ground 5 chs. N. of the cor.

November 14, 1904.

November 15.

At 3 hrs. 42-21 min. A.M., l.m.t. by my watch which has correct l.m.t., I observe Polaris at western elongation in accordance with Manual of Instructions, and mark a point in the line thus determined, on a plug driven in the ground 5 chs. N. of my station.

At 7 hrs. 0' A.M. l.m.t. I lay off the azimuth of Polaris $\frac{1' 27'}{10' 28'}$ to the E. and mark the meridian thus determined, by cutting a small groove in the stone set November 14th, on which the true meridian coincides with the meridian established by the solar.

Subdivision of Tp. 9 N R 10 E.

Chains	<p>At 7 hrs. 30 min. A.M. l.m.t.. I set off $34^{\circ} 4-1/2'$ $^{18^{\circ} 23-1/2'}$ S. on the decl. arc and mark a point in the meridian determined with the solar by a cross (+) on the stone already set 5 chs. N. of my station. This mark coincides with the merid- ian established by the Polaris observation. The solar apparatus by P.M. and A.M. observations defines positions for meridians which coincide with the meridian estab- lished by the Polaris observation. Therefore I con- clude that the adjustments of the instrument are satis- factory. The mag. brg. of the true meridian at 7 hrs. 30 min. A.M. is $N13^{\circ} 57' W.$ The angle thus determined gives the mean mag. decl. $13^{\circ} 57' E.$</p> <p>From the standard cor. of Secs. 35 and 36 on S. bdy. of the Tp. previously described, I run N. $0^{\circ} 1'$ W bet. December 1st, 1904

This Tp. is mountainous.

The soil along the bottom lands of Tonto Creek and Rye Creek, is quite fertile. The remainder of the Tp. is rocky and unfit for agricultural purposes, although producing an abundant growth of grass, valuable for grazing purposes.

There is no timber in the Tp. . except a few sycamore and cottonwood trees along Tonto Creek and Rye Creek.

There are two settlers in Sec. 26 and 1 each in Secs. 18, 24 and 33.
