Preliminary Oaths of Assistants.

WE, John W. Danner and Charles McCormick
do solemnly swear that we will well and faithfully execute the duties of chainmen; that we will level the chain upon even and uneven ground, and plumb the tally pins, either by sticking or dropping the same; that we will report the true distances to all notable objects, and the true lengths of all lines that we assist in measuring, to the best of our skill and ability, and in accordance with instructions given us, in the survey of the W. S. and N. and N. W. 1/4 of the Body of T. 2 N., R. 15 E.;
sec. E. and W. lots. T. 3 N. R. 15 E.; and sec. N. lot. T. 2 N. R. 14 E.
Charles McCormick, Chainman.

Survey commenced July 24, 1906, and executed with a Queen Light Mountain Transit, with Burts' Solar Attachment No. 4607. The horizontal limb is provided with two double verniers placed opposite to each other, reading to single minutes of arc, which is also the least count of the verniers of the latitude and declination arc.

The instrument was examined, tested on the true meridian at Phoenix, found correct, and was approved by the Surveyor General for Arizona, July 17, 1906.

I examined the adjustments of the transit, and correct the level and collimation errors, then, to test the solar apparatus, by comparing its indications, resulting from solar observations made during a.m. and p.m. hours, with a meridian determined by observation on Polaris, I proceed as follows:

At the ~~possec.~~ cor. of Secs. 33 on the South bdy. of T. 2 N., R. 15 E., latitude $33^{\circ} 27' 53''$ N., longitude $110^{\circ} 49' 11''$ W., I set off $33^{\circ} 28' 00''$ N. on the lat. arc, $19^{\circ} 56'$ N. on the decl. arc; and at 3 H 30 m, p.m., l.m.t., determine with the solar a meridian and mark a point thereof, on a stone firmly set in the ground, 5 chs. N. of the ~~possec.~~ cor.

At 11 h 22 m., p.m., l.m.t., I observe Polaris at eastern elongation, in accordance with the Manual of Instructions, and mark a point in the line thus determined, on a peg driven in the ground, 5 chs. N. of my station.

July 24, 1906.

July 25, 1906. At 6 a.m., l.m.t., I lay off the azimuth of Polaris, $1^{\circ} 26'$ to the west, and mark the meridian thus determined, by cutting a small groove in the stone set July 24, on which the meridian falls 0.4 ins. east of the mark determined by the solar.

At 7 h. a.m., l.m.t., I set off $33^{\circ} 28'$ N. on the lat. arc; $19^{\circ} 48'$ N. on the decl. arc and mark a point in the meridian determined with the solar, by a cross on the stone already set, 5 chs. N. of my station, this mark falls 0.2 ins. east of the meridian established by the Polaris observation.

The solar apparatus, by p.m., and a.m., observations, defines positions for meridians, respectively about $0' 21''$ west and $0' 10''$ east of the meridian established by the Polaris observations; therefore, I conclude that the adjustments of the instruments are satisfactory.

The magnetic bearing of the true meridian at 8 h 30 m a.m., is N. $13^{\circ} 30'$ W., the angle thus determined gives the magnetic dec. $13^{\circ} 30'$ E.
