Subdivision of T. 21 S. R. 22 E. Chains Survey commenced May 22, 1909, and executed with a Young & Sons light mountain transit No. 6492 with, Smith patent solar attachment on side. The horizontal limb of the instrument is provided with two double verniers placed opposite to each other and each reading to 1' of arc, which is also the least readong of the lat. & decl. arcs I examine, and test the levels, the line of collimation and standards of the instrument and find same correct. Then to test the solar apparatus by comparing the results of observations for meridian made during a.m.& p.m. hours with a true meridian determined by Polaris observations, I proceed as follows: 5 h p.m., l.m.t., at the Cor. of Secs. 35,36, 1 & 2 on S. Bdy. of Tp. as recently established by me and heretofore described, I set off 20° 26' N. on the decl. arc and 31° 33' N. on the lat. arc and determine a meridian with the solar, and mark a point in the meridian thus determined by a nail in a tree 6 chs. N. of my station. May 23,1909. 3h 20m a.m., l.m.t., I observe Polaris at E. Elong. in accordance with instructions in the "Manual and mark the line thus determined by a tack in a stake driven firmly in the ground 6 chs. N. of my station. At 6h a.m., l.m.t., I set off the azimuth of Polaris

1° 23' to the W. and mark the true meridian thus
established by a tack in the tree 6 chs. N. of my stat,
which point falls, \( \frac{1}{4} \) in. W. of the line given by the solar on preceding evening. At 7h a.m., l.m.t., I set off arc and 31 33 N., on the lat 20° 35 N.on the decl. arc and 31° 33' N. on the lat. arc and determine a meridian with the solar, which gives a line 1/8 in W. of the line of the true meridian determined by Polaris observation. The solar apparatus by a.m. & p.m. observations defined lines for meridians about 11" E. & 6" W. of the true meridian determined by Polaris observation. These errors being probably less than the usual errors of observation, I conclude that the adjustments of the instrument are satisfactory. The magentic bearing of the true meridian at 7h a.m. l.m.t. is N. 13° 30' W. The angle thus determined gives the magnetic declination as 13° 30' E. From the Cor. above desdribed, I run, as per instructions,
N. 0° 1' W. bet. Secs. 35 & 36. Over rolling land, through very dense tesseta, & mesquite.

10.00 Top of low ridge, brs. NW. & SE. desc. grad. 16.00 Wash, 2 chs. wide, course NW. asc. grad. Wash 30 lks. wide, course NW. **37.**50 40.00 Set a limestone 20x10x10 ins. 15 ins.in ground for Sec. General Description.

This Township is mostly a broken, rolling mesa or plain, covered almost throught out with a dense undergrowth of mesquite, tesseta, greasewood, and black brush.
The soil ranges from a loam to sandy, gravelly and stony. being very fertile in the broad washes and draws, and in the small tracts along the Sab Pedro River. There is some mesquite timber in the large washes and in the lowland of the river, also some cottonwood willow, and walnot along the River. The NW. portion is more broken and the small buttes therein are very stony and almost inaccessible. There is but little water in the tp.

The San Pedro River has a permanent flow of about
80 miners inches of water, which could be used to great
advantage in irrigating the small tracts along the River. H.W.Hasselgren has a small house in sec. 19, and has fenced and improved small tracts of lan in the valley. J.G.Wolff has a substantial hous in ... NW. 1/4 of sec.19 and has highly improved the land he occupies. Chas Labrosse has a tent house, with well and other small improvements in sec.13, being a hay ranch. Mrs. L. Hasselgren has a small tract of land outside the San Rafael land grant in sec. 30, though her resifence, which is a substantial, good dwelling is within the Grant. The land in the NW. portion of the tp. is mineral bearing, and shows evidence of having been prospected in many places, but the workings are

more superficial than thorough.
The original patented claims in sec. 6 appear to have been abandoned, as all traces of the orig. cor.
monuments have been obliterated, and the ground covered with new location monuments.

The proper closing of my lines on the exterior lines of the San Rafael del Valle Grant required extreme care and accuracy in the alimement and measurement.

I find the lines of said Grant excellent in measurement and alimement and the corners well established.

However, the line of the W. bdy. of T. 21 S. R. 22 E.

Is somewhat erroneous, and the measurements barely in limits, making it somewhat difficult to close my surveys in a satisfactory manner.

In the execution of these surveys as I employed my assistants in the immediat vicinity of the work and as considerable delay and expense would have been incurred to appear before a Notary public or other officer duly qualified to administer the necessary loaths, I was compelled to administer the preliminary and final oaths to my assistants.

May 30,1909.

U.S.Deputy Surveyor.

To authority for red ink corrections was Seputo letter Dept. 7- 09.

## FINAL OATHS OF DEPUTY SURVEYOR AND HIS ASSISTANTS.
