OF THE SURVEY OF THE

Subdivision of Township 21 North, Range 14 West,

Of the Gila and Salt River Base and Meridian,

In the State of Arizona,

EXECUTED BY

Jesse B. Wright,

and

William H. Elliott

In the capacity of U. S. Surveyor, under instructions dated August 28, 1912,
issued by the United States Surveyor General to govern surveys included in
Group No. 13, which were approved by the Commissioner of the General Land
Office, September 28, 1911, pursuant to authority contained in the Act of
Congress dated June 25, 1910.

Survey commenced February 2, 1912

Survey completed February 9, 1912

Survey commenced Feb. 2, 1912., and executed jointly by Jesse B. Wright, and William H. Elliott, U.S. Surveyors, Wright using transit No. 6492, made by Young & Son's, with Smith's patent solar attachment on side.

The plates of this instrument reading by double verniers placed opposite to each other to 1' of arc, which is also the least reading of the verniers of the latitude and declination arcs. Elliott using transit No. 8480, made by Young & Son's, with Smith's patent solar attachment on side. The plates of this instrument also reading by two double vernier placed opposite to each other to 1' of arc, which is also the least reading of the verniers of the latitude and decl. arcs.

At our camp near the cor. of secs. 15, 16, 21 & 22, in the centre of T. 21 N., R. 14 W., we examine and test all the adjustments of the transits and solars, and finding same correct; then, in order to test the solar attachments of the instruments, by comparing the results of observations on the sun, for meridians, made during p.m. & a.m. hours respectively, with a true meridian established by observation of Polaris, we proceed as follows.

At 4h p.m., l.m.t., at a point near our camp, we set off $35^{\circ}12'N.$ on the lat. arcs, and $16^{\circ}56'S.$ on the decl. arcs, and determine meridian with the solars, and mark the meridian thus determined by tacks driven in a stake driven firmly in the ground 5 chs. N. of our station, the instruments varying about 15".

At 10h 36m p.m., l.m.t., we observe Polaris at Western Elongation, in accordance with instructions in the Manual, and mark the line thus determined by a tack in a stake driven firmly in the ground 6 chs. N. of our station.

Feb. 2, 1912.

Feb. 3, 1912.

At 7h 45m a.m., l.m.t., we set off the azimuth of Polaris, $1^{\circ}25'$ to the East, and mark the true meridian thus determined by a tack in the stake 5 chs. N. of our station, which point falls about .20 ins. E., and .10 ins. W. of the points in the meridian as determined by the solars of instruments of transits Nos. 8480, and 6492 respectively.

At 8h a.m., l.m.t., we set off $16^{\circ}44'N.$ on the decl. arcs, and $35^{\circ}12'N.$ on the lat. arcs, and determine meridians with the solars, and mark the meridians thus determined by tacks driven in the stake 5 chs. N. of our station, which points as given by instruments Nos. 8480 and 6492 fall respectively .15 ins. E., and .15 ins. W. of the point in the true meridian as established by Polaris observation. We find that instruments Nos. 8480 and 6492 by solar observations defines positions for meridians about 10° W., and 16° E., respectively by p.m. observations; and about 8" E. and W. respectively by a.m. observations; therefore we conclude that the instruments are in satisfactory adjustment.

The magnetic bearing of the true meridian at 8h a.m. is N. $15^{\circ}50'W.$; the angle thus determined gives the magnetic declination as $15^{\circ}50'E.$

Elliott proceeds to the Std. Cor. of Secs. 35 & 36, on the South Bdy. of the Tp., to begin the subdivision of the Tp., while Wright proceeds to the NE. cor. of the Tp. to begin the re-survey of the North Boundary of the Tp.

William H. Elliott, U.S. Surveyor

At 9h a.m., l.m.t., at the Standard cor. of secs. 35 & 36, on the South Bdy. of the Tp., which is an iron post 3 ins. in diam. 1 ft. above ground, with brass cap, marked & witnessed as described by the Surveyor General, I set off $16^{\circ}45'S.$ on the decl. arc, and $35^{\circ}09\frac{1}{2}'N.$ on the lat. arc, and determine a meridian with the solar, Thence I run, as per instructions,

Then I measure a base line of 10 and 11 chs. N. $89^{\circ}58'$ E., 11 chs. being the longest base line possible owing to the rough ground.

At 10 chs. on this line, the flag to the North, brs. N. $14^{\circ}46'$ W.; the included angle is therefore $75^{\circ}19'$. Distance to flag is tang. $75^{\circ}19' \cdot 3.8163 \times 10 = 38.16$ chs.

At 11 chs. on this line, the flag to the North, brs. N. $16^{\circ}7'$ W.; the included angle is therefore $73^{\circ}55'$. Distance to flag is tang. $73^{\circ}55' \cdot 3.4684 \times 11 = 38.15$ chs.

This latter distance being derived from the longer base line, I assume as correct, and proceed to flag at

Jesse B. Wright
U.S. Surveyor.

--General Description.--

T. 21 N., R. 14 W. is rolling and broken in the southern part and hilly and ~~mountainous~~ in the northern part. The soil is in general a granite gravel, loose and sandy in the larger valleys of main washes, and is covered throughout the greater part of the Tp. with a fair growth of native grass. There is no water in the Tp. There is considerable cedar in parts of the Tp., but nothing of any timber value. The mountains in the northern part of the Tp. show slight indications of mineral in places. There are no settlers in the township.
